different fields. However, there are competing reports concerning the accuracy of those locations and little research has been done in manually comparing the IP geolocation databases and web page geographic information. Some research has been done using a variety of analytical techniques in order to estimate IP address accuracy, but there has not been a large scale manual investigation. Members of the GIScience community have developed techniques for visualizing point data, but there has not been much research in how to apply these practices to the phenomena of IP address point data. This thesis research worked in the intersection of GIScience, Internet research, and Geostatistics in order to examine IP accuracy, IPv4 to the city level, and to determine the better methods for visualizing IP address point values. The first part of this thesis examined IP geolocation address accuracy in more depth and processed several datasets for locational accuracy. Using a previously built custom searching tool that uses popular search engine APIs to extract a list of web pages for a keyword, six keywords were gathered. These keywords were Mitt Romney, Rick Santorum, Michael McGinn, Jerry Sanders, Flu, HPV Vaccine. When manually visiting each web page gathered by the searching tool, three types of data were gathered. First, I categorized each web page into one of twelve categories ranging from Blog and News to Education and Governmental. Second, the slant of the web page was examined, answering whether it was supporting the subject at hand or attacking the subject. Third, and most important, this research looked to find the mailing or street address of the web page's content creator and compare this address to the given IP address. The second part of this thesis has attempted to answer the question of how to visualize IP address geolocation data using the processed IP address data. Framing IP addresses as points and using a kernel density function in order to create a surface, how do different input parameters affect the final surface and therefore pattern recognition? This study examined the kernel radius value, the method of calculating a population value, the method used to normalize the data, and the interactions of the different categories discussed above. By comparing the resulting maps side by side, the spatial patterns identified using IP addresses are better understood while recognizing better techniques to remove unwanted IP address spatial inaccuracies. The resulting spatial patterns with relevant properties of the keywords were also compared. **IP**

Address Management Timothy Rooney, 2011-01-11. This book will be the first covering the subject of IP address management. IPAM: The practice of IPAM includes the application of network management disciplines to IP address space and associated network services, namely DHCP (Dynamic Host Configuration Protocol) and DNS (Domain Name System). The consequence of inaccurately configuring DHCP is that end users may not be able to obtain IP addresses to access the network. Without proper DNS configuration, usability of the network will greatly suffer as the name to address lookup process may fail. Imagine having to navigate to a website or send an email or an instant message by IP address instead of by name. It is equally important that these DHCP and DNS configurations be based on a common IP address plan which maps out the IP address hierarchy, subnets, address pools, and domains. IPAM applies management disciplines to these core services, including configuration change control, auditing, reporting, and so on, and they are necessary given the absolute requirement for

properly managing IP space and DHCP and DNS servers The linkages among an IP address plan DHCP server configuration and DNS server configuration are inseparable a change of an IP address will affect DNS information and perhaps DHCP as well These functions provide the foundation for today s converged services IP networks so they need to be managed using a rigorous approach Today there is no single book that covers the management of these linkages and services they provide IP Address Management Principles and Practice will fill that gap While several books are available for leading vendors DHCP and DNS services implementations few exist for IP address planning and none exist that unifies these three topics To obtain a free copy of the IPAM Configuration Guide please send an email to ieeeproposals@wiley.com **Getting More from Your**
