

Ingersoll Rand EH Heated and HB Heated Blower Desiccant Dryers

EH heated desiccant dryer

Ingersoll Rand EH heated desiccant dryers incorporate an external heater to heat dry purge air. This allows EH dryers to divert significantly less dry air from the air system for regenerating desiccant than is required by heatless dryers.

Available in sizes ranging from 4.2 nm³/min. (150 scfm) to 226.5 nm³/min. (8,000 scfm), Ingersoll Rand EH dryers deliver -40°C (-40°F) pressure dew point air for critical applications.

Ingersoll Rand HB heated blower desiccant dryers are equipped with dedicated durable centrifugal blowers to provide purge air for regeneration, eliminating the need to divert dry compressed air from the air system. Instead, the blower directs ambient air through an external heater and then through the off-line tower to regenerate the desiccant. This means more compressed air is available for critical downstream applications. Available in sizes from 4.2 nm³/min. (150 scfm) to 226.5 nm³/min. (8,000 scfm), Ingersoll Rand HB dryers deliver -40°C (-40°F) pressure dew point air.

The EH and HB dryers use high-performance ball or butterfly valves for switching and purge operations. These non-lubricated valves are designed specifically for high temperature applications and feature stainless steel internals as well as filled PTFE seats and include double-acting pneumatic actuators.

Both EH heated and HB heated blower models provide the reliability and safety features of heatless dryers, with increased energy efficiency. These features include heatless back-up mode in the event of a heater or blower malfunction and an innovative solid-state relay heater control to extend valve and heater life. NEMA 4 electrical enclosures are standard and include an advanced multi-function digital controller.
