Power Converters and AC Electrical Drives with Linear Neural Networks Maurizio Cirrincione, Marcello Pucci, Gianpaolo Vitale, 2017-12-19 The first book of its kind Power Converters and AC Electrical Drives with Linear Neural Networks systematically explores the application of neural networks in the field of power electronics with particular emphasis on the sensorless control of AC drives It presents the classical theory based on space vectors in identification discusses control of

electrical drives and power converters and examines improvements that can be attained when using linear neural networks. The book integrates power electronics and electrical drives with artificial neural networks ANN. Organized into four parts, it first deals with voltage source inverters and their control. It then covers AC electrical drive control focusing on induction and permanent magnet synchronous motor drives. The third part examines theoretical aspects of linear neural networks, particularly the neural EXIN family. The fourth part highlights original applications in electrical drives and power quality, ranging from neural based parameter estimation and sensorless control to distributed generation systems from renewable sources and active power filters. Simulation and experimental results are provided to validate the theories. Written by experts in the field, this state-of-the-art book requires basic knowledge of electrical machines and power electronics as well as some familiarity with control systems, signal processing, linear algebra, and numerical analysis. Offering multiple paths through the material, the text is suitable for undergraduate and postgraduate students, theoreticians, practicing engineers, and researchers involved in applications of ANNs.

Mathematical Methods for Neural Network Analysis and Design Richard M. Golden, 1996. For convenience, many of the proofs of the key theorems have been rewritten so that the entire book uses a relatively uniform notation.

Surfaces in Range Image Understanding Paul J. Besl, 2012-12-06. Machine perception requires the digitization of physically sensed signals. During the last ten years, digital range images have become available from a variety of sensors. This book is devoted to the problem of range image understanding with computers. Its aims are to develop a theoretical framework, devise appropriate algorithms, and demonstrate a software implementation of those algorithms that will confirm the usefulness of surfaces in range image understanding. It will be of interest to the researcher studying the theoretical concepts of image understanding as well as the engineer who wants to implement these concepts in practical applications.
