**Effectiveness of teachers' guides in the Global South** Benjamin Piper, Yasmin Sitabkhan, Jessica Mejia, Kellie Betts, 2018-05-10 This report presents the results of RTI International Education's study on teachers' guides across 13 countries and 19 projects. Using quantitative and qualitative methods, we examine how teachers' guides across the projects differ and find substantial variation in the design and structure of the documents. We develop a scripting index so that the scripting levels of the guides can be compared across projects. The impact results of the programs that use teachers' guides show significant impacts on learning outcomes associated with approximately an additional half year of learning, showing that structured teachers' guides contribute to improved learning outcomes. During observations, we find that teachers make a variety of changes in their classroom instruction from how the guides are written, showing that the utilization of structured teachers' guides does not create robotic teachers unable to use their own professional skills to teach children. Unfortunately, many changes that teachers make reduce the amount of group work and interactivity that was described in the guides, suggesting that programs should encourage teachers to more heavily utilize the instructional routines designed in the guide. The report includes a set of research-based guidelines that material developers can use to develop teachers' guides that will support effective instructional practices and help improve learning outcomes. The key takeaway from the report is that structured teachers' guides improve learning outcomes, but that overly scripted teachers' guides are somewhat less effective than simplified teachers' guides that give specific guidance to the teacher but are not written word for word for each lesson in the guide.

Psychological and Pedagogical Considerations in Digital Textbook Use and Development Railean, Elena, 2015-04-30 This book offers balanced coverage of the technological solutions that contribute to the design of digital textbooks and contribute to achieving learning objectives, offering an emphasis on assessment mechanisms and learning theory.

**Balancing the Tension between Digital Technologies and Learning Sciences** Dirk Ifenthaler, Demetrios G. Sampson, Pedro Isaías, 2021-02-16 This volume focuses on the implications of digital technologies for educators and educational decision makers that is not widely represented in the literature. While there are many volumes on how one might integrate a particular technology, there are no volumes on how digital technologies can or should be exploited to address the needs and propel the benefits of large-scale teaching, learning, and assessment.

The State of the Art in Student Engagement Carl Senior, 2015-07-10 There is an extensive literature conducted from a range of theoretical perspectives and methodologies on the role of groups and student learning in higher education. However, here the concept of the group is heavily contested at a theoretical level, but within higher education practice, characterizing the group has tended to be clear-cut. Groups of students are often formed within the parameters of specific educational programs to address explicitly defined learning objectives. These groups are often small-scale and achieve tasks through cooperative or collaborative learning. Cooperative learning involves students dividing roles and responsibilities between group members so learning becomes an

independent process and outcome On the other hand collaborative learning involves students working together by developing shared meanings and knowledge to solve a task or problem From this perspective learning is conceptualized as both a social process and individual outcome That is collaborative learning may facilitate individual student conceptual understanding and hence lead to higher academic achievement The empirical evidence is encouraging as has been shown that students working collaboratively tend to achieve higher grades than students working independently However the above perspectives on student engagement assume that groups are formed within the confines of formal learning environments e g lecture theaters involve students on the same degree program have the explicit function of achieving a learning task and disband once this has been achieved However students may also use existing social networks such as friendship groups as a mechanism for learning which may occur outside of formal learning environments There is an extensive literature on the role and benefits of friendship groups on student learning within primary and secondary education but there is a distinct lack of research within higher education This ebook is innovative and ambitious and will highlight and consolidate the current understanding of the role that student based engagement behaviors may serve in effective pedagogy A unique aspect of this research topic will be the fact that scholars will also be welcome to submit articles that describe the efficacy of the full range of approaches that have been employed to facilitate student engagement across the sector

**Executive Function and Education** Mariëtte Huizinga,Dieter Baeyens,Jacob A. Burack,2018-09-21 Executive function is an umbrella term for various cognitive processes that are central to goal directed behavior thoughts and emotions These processes are especially important in novel or demanding situations which require a rapid and flexible adjustment of behavior to the changing demands of the environment The development of executive function relies on the maturation of associated brain regions as well as on stimulation in the child s social contexts especially the home and school Over the past decade the term executive function has become a buzzword in the field of education as both researchers and educators underscore the importance of skills like goal setting planning and organizing in academic success Accordingly in initiating this Research Topic and eBook our goal was to provide a forum for state of the art theoretical and empirical work on this that both facilitates communication among researchers from diverse fields and provides a theoretically sound source of information for educators The contributors to this volume who hail from several different countries in Europe and North America have certainly accomplished this goal in their nuanced and cutting edge depictions of the complex links among various executive function components and educational success

**Industrial Waste** Herbert Pöllmann,2021-08-23 Industrial residues are obtained from all treatments of raw materials in industry during the process of mining raw materials treatment and final usage During these processes of enrichment optimization and utilization of raw materials only part of the original material can be used for the dedicated application and some left over parts remain This contribution focuses on residues like mining overburdens ore residues and ore processing residues like slags but also on incineration ashes and water purification muds Natural materials like
