Modern Control Systems Engineering Zoran Gajic, Zoran

Gajić, M. Lelić, 1996 The book represents a modern treatment of classical control theory and application concepts

Theoretically it is based on the state space approach where the main concepts have been derived using only the knowledge from a first course in linear algebra Practically it is based on the MATLAB package for computer aided control system design so that the presentation of the design techniques is simplified The inclusion of MATLAB allows deeper insights into the dynamical behaviour of real physical control systems which are quite often of high dimensions Continuous time and discrete time control systems are treated simultaneously with a slight emphasis on the continuous time systems especially in the area of controller design Instructor's Manual 0 13 264730 3 *Subject Guide to Books in Print*, 1984 Scientific and Technical
