Guidelines for Dry-Stack Concrete Masonry The Masonry Society, 2021-12

Design and Construction Guidelines for Dry Stack Concrete Masonry was developed by The Masonry Society s Design Practices Committee as a non mandatory aid for designers building officials contractors educators and others interested in dry stack masonry construction

Dry stack masonry construction which consists of individual masonry units placed without the use of mortar in the head and bed joints is one of the earliest forms of construction

Despite its historical use there is little in the way of contemporary design and construction guidance in the United States on the use of dry stack masonry systems for structural applications

Because the majority of dry stack research has been limited to reinforced or prestressed concrete masonry construction the scope of this guide is limited to reinforced or prestressed dry stack construction of concrete masonry units

There are dry stack masonry systems specifically intended for veneer applications

Because veneer systems do not function as part of the structural system they are not included in this guide

In addition this guide does not address the design or construction of unreinforced dry stack

masonry systems or segmental retaining wall systems
