

Lab 5: RATE AND ORDER OF A CHEMICAL REACTION: IODINATION OF ACETONE

I. Introduction

The purpose of this experiment is to study a reaction that, in the vicinity of room temperature, proceeds at a moderate, relatively easily measured rate. For a given reaction, the rate typically increases with an increase in the concentration of any reactant. The relation between rate and concentration is a remarkably simple one in many cases. The objectives for this experiment include to determine the orders of reaction with respect to acetone and hydrogen ion; to confirm that the order of reaction with respect to iodine is zero; and to evaluate the rate constant k for the mixtures prepared at room temperature. For this experiment, we took safety precautions using laboratory materials and solutions, including wearing personal protective equipment.

II. Results Analysis
