

How to Find Intersecting Lines

Intersecting lines are when two or more lines intersect at a crossroads in a plane. There is one common point that lies on both lines which is called the point of intersection.

 Example

To do this, we must know that two parallel lines have no point of intersection. Perpendicular lines, or non-parallel lines intersect at right angles.

The single point of intersection of two line equations can be found graphically or by solving a pair of simultaneous equations.
