**United States. Congress. House.
Committee on Education**

National Physical Science Grade 10 Chemistry November 2014:

Science Teaching in Schools Great Britain: Parliament: House of Lords: Science and Technology Committee, 2006-11-05
The Committee's report examines science and mathematics teaching in secondary schools in England focusing on the following issues: the take up of science and mathematics at GCSE and A level; the provision of careers advice to students; problems in the recruitment and retention of teachers; the quality of teaching methods; and the role of continuing professional development. The Committee finds that effective science teaching in schools is essential both in order to ensure a satisfactory general level of scientific literacy in society and to enable the next generation of scientists and engineers to progress into higher education and beyond. It argues that the current examination system forces students to study an excessively narrow range of subjects at too early an age and it recommends that the Government should reconsider the Tomlinson proposals for a broader diploma based system for 14-19 year old students based on the International Baccalaureate. This would ensure that students receive a more rounded education and are not made to over specialise before they are able to see the merits of studying science and mathematics. Concerns are also raised about the shortage of science teachers, particularly specialist physics and chemistry teachers; the quality of careers advice in schools; and the importance of practical science in schools.

Students' Understanding of Research Methodology in the Context of Dynamics of Scientific Progress Mansoor Niaz, Mayra Rivas, 2016-04-20. This book discusses how to improve high school students' understanding of research methodology based on alternative interpretations of data, role of controversies, creativity, and the scientific method in the context of the oil drop experiment. These aspects form an important part of the nature of science NOS. The study reported in this volume is based on a reflective, explicit, and activity-based approach to teaching nature of science NOS that can facilitate high school students' understanding of how scientists elaborate theoretical frameworks, design experiments, report data that leads to controversies, and finally, with the collaboration of the scientific community, a consensus is reached. Most students changed their perspective and drew concept maps in which they emphasized the creative, accumulative, controversial nature of science and the scientific method. Hearings United States.
