Finite Volumes for Complex

Applications IX - Methods, Theoretical Aspects, Examples Robert Klöforn, Eirik Keilegavlen, Florin A. Radu, Jürgen Fuhrmann, 2020-06-09 The proceedings of the 9th conference on Finite Volumes for Complex Applications Bergen June 2020 are structured in two volumes The first volume collects the focused invited papers as well as the reviewed contributions from internationally leading researchers in the field of analysis of finite volume and related methods Topics covered include convergence and stability analysis as well as investigations of these methods from the point of view of compatibility with physical principles Altogether a rather comprehensive overview is given on the state of the art in the field The properties of the methods considered in the conference give them distinguished advantages for a number of applications These include fluid dynamics magnetohydrodynamics structural analysis nuclear physics semiconductor theory carbon capture utilization and storage geothermal energy and further topics The second volume covers reviewed contributions reporting successful applications of finite volume and related methods in these fields The finite volume method in its various forms is a space discretization technique for partial differential equations based on the fundamental physical principle of conservation Many finite volume methods preserve further qualitative or asymptotic properties including maximum principles dissipativity monotone decay of free energy and asymptotic stability making the finite volume methods compatible discretization methods which preserve qualitative properties of continuous problems at the discrete level This structural approach to the discretization of partial differential equations becomes particularly important for multiphysics and multiscale applications

The book is a valuable resource for researchers PhD and master s level students in numerical analysis scientific computing and related fields such as partial differential equations as well as engineers working in numerical modeling and simulations

Digital Signal Processing with Matlab Examples, Volume 2 Jose Maria Giron-Sierra,2016-12-02 This is the second volume in a trilogy on modern Signal Processing The three books provide a concise exposition of signal processing topics and a guide to support individual practical exploration based on MATLAB programs This second book focuses on recent developments in response to the demands of new digital technologies It is divided into two parts the first part includes four chapters on the decomposition and recovery of signals with special emphasis on images In turn the second part includes three chapters and addresses important data based actions such as adaptive filtering experimental modeling and classification **Exponential**

Entropy for Simplified Neutrosophic Sets and Its Application in Decision Making Jun Ye,Wenhua Cui, Entropy is one of many important mathematical tools for measuring uncertain fuzzy information As a subclass of neutrosophic sets NSs simplified NSs including single valued and interval valued NSs can describe incomplete indeterminate and inconsistent information Based on the concept of fuzzy exponential entropy for fuzzy sets this work proposes exponential entropy measures of simplified NSs named simplified neutrosophic exponential entropy SNEE measures including single valued and interval valued neutrosophic exponential entropy measures and investigates their properties *From Bioinspired Systems*

and Biomedical Applications to Machine Learning José Manuel Ferrández Vicente,José Ramón Álvarez-Sánchez,Félix de la Paz López,Javier Toledo Moreo,Hojjat Adeli,2019-05-09 The two volume set LNCS 11486 and 11487 constitutes the proceedings of the International Work Conference on the Interplay Between Natural and Artificial Computation IWINAC 2019 held in Almer a Spain in June 2019 The total of 103 contributions was carefully reviewed and selected from 190 submissions during two rounds of reviewing and improvement The papers are organized in two volumes one on understanding the brain function and emotions addressing topics such as new tools for analyzing neural data or detection emotional states or interfacing with physical systems The second volume deals with bioinspired systems and biomedical applications to machine learning and contains papers related bioinspired programming strategies and all the contributions oriented to the computational solutions to engineering problems in different applications domains as biomedical systems or big data solutions *An International Review of Applications in School Mathematics* ,1983 *Examples and Counterexamples in Graph Theory* Michael Capobianco,John C.
