Nationalism and Archaeology in Europe Margarita Díaz-Andreu, Timothy Champion, 2014-10-24 Archaeologists from many different European countries here explore the very varied relationship between nationalistic ideas and archaeological activity through the course of the nineteenth and twentieth centuries The resurgence of nationalism was one of the most prominent features of the European political scene in the 1990s when this book was originally published The past provides a large supply of ideas and images to support the claims of national identity deeply rooted in remote generations The remote past revealed by archaeology also plays a part heroes heroines golden ages long disappeared objects to admire and sites to provoke the memory all called on to further the cause of nationalism Drawing on the authoritative insights of the indigenous contributors this book examines the issues throughout modern Europe All of the chapters share a concern to see archaeology and the study of the past as intimately related to contemporary social and political questions The present shapes the way we think about the past but the past also provides us with evidence for thinking about the present These issues are timeless and this comprehensive examination of a host of issues remains important for historians and those pursuing nationalistic politics

Archaeology Under Dictatorship Michael L. Archaeological Practice as Politics and Ethics John Carman, 2024-08-29 This book is of relevance to all archaeologists and all others concerned with how an interest in the past impacts on the present This book explores the manner in which archaeology as a discipline and a field of endeavour contributes to the modern world The focus throughout the book is on practices the range of different things that archaeologists do and how they do and have done it in order to explore the field as a distinctive aspect of social practice over time It also concerns the structures social political economic professional philosophical in which archaeology is performed and the consequences for the discipline and its practitioners Throughout there is a concern especially with archaeology as a field of political and ethical decision making aspects well recognised by practitioners but rarely emphasised The book both asks and answers questions about the perception of archaeology from both within and outside the field The book draws widely on previous work by the author and others looking at the techniques of the field the people involved the political and social impacts both on and by the field In doing so it seeks to bring these different perspectives together to create a more holistic idea of what archaeology is has been and could be The book is offered to those outside the field as a justification for archaeology a field coming under increasing pressure from those who consider it as so many humanities and social science disciplines as an expensive luxury
