in the 1860s spectroscopy has become one of the most fruitful research technologies in analytic chemistry physics astronomy
and other sciences This book is the first in depth study of the ways in which various types of spectra especially the sun s
Fraunhofer lines have been recorded displayed and interpreted The book assesses the virtues and pitfalls of various types of
depictions including hand sketches woodcuts engravings lithographs and from the late 1870s onwards photomechanical
reproductions The material of a 19th century engraver or lithographer the daily research practice of a spectroscopist in the
laboratory or a student s use of spectrum posters in the classroom all are looked at and documented here For pioneers of
photography such as John Herschel or Hermann Wilhelm Vogel the spectrum even served as a prime test object for gauging
the color sensitivity of their processes This is a broad contextual portrayal of the visual culture of spectroscopy in the 19th
and early 20th centuries The illustrations are not confined to spectra they show instruments laboratories people at work and
plates of printing manuals The result is a multifaceted description focusing on the period from Fraunhofer up to the
beginning of Bohr s quantum theory A great deal of new and fascinating material from two dozen archives has been included
