Overemployment i e the preference for fewer work hours is a widespread phenomenon in western societies which may have negative consequences for individual well being and organizational functioning Previously overemployment has been defined from an economic perspective mainly as a time money trade off problem This work is the first to adopt a psychological and subjectivist view on overemployment Over three research projects a theory of overemployment its causes and consequences is constructed and tested In addition a multidimensional overemployment scale is developed and initially validated The three research projects include first a review on overemployment conceptualizations and measurements second a Grounded Theory interview study with the aim to develop a theory on overemployment its causes and consequences and third a scale development study comprising over 1 400 participants over 4 studies The importance of overemployment for individual well being e g burnout job satisfaction as well as for organizational variables e g commitment turnover intention is shown Overemployment is found to be a multidimensional construct consisting of three dimensions length density and distribution of work time The developed theory and scale will allow future researchers to analyze overemployment in more detail The work offers interesting insights for HR and management practitioners when it comes to creating attractive working conditions **Pleasure and Leisure in the Middle Ages and Early Modern Age** Albrecht Classen,2019-08-05 Jan

Huizinga and Roger Caillois have already taught us to realize how important games and play have been for pre modern civilization Recent research has begun to acknowledge the fundamental importance of these aspects in cultural religious philosophical and literary terms This volume expands on the traditional approach still very much focused on the materiality of game toys cards dice falcons dolls etc and acknowledges that game constituted also a form of coming to terms with human existence in an unstable and volatile world determined by universal randomness and fortune Whether considering blessings or horse fighting falconry or card games playing with dice or dolls we can gain a much deeper understanding of medieval and early modern society when we consider how people pursued pleasure and how they structured their leisure time The contributions examine a wide gamut of approaches to pleasure considering health issues eroticism tournaments playing music reading and listening drinking alcohol gambling and throwing dice This large issue was also relevant of course in non Christian societies and constitutes a critical concern both for the past and the present because we are all homines ludentes

Global Perspectives on Death in Children's Literature Lesley D. Clement, Leyli Jamali, 2015-07-30 This volume visits death in children's literature from around the world making a substantial contribution to the dialogue between the expanding fields of Childhood Studies, Children's Literature and Death Studies. Considering both textual and pictorial representations of death, contributors focus on the topic of death in children's literature as a physical reality, a philosophical concept, a psychologically challenging adjustment and/or a social construct. Essays covering literature from the US, Mexico, El Salvador, Guatemala, Canada, the UK, Sweden, Germany, Poland, Bulgaria, Brazil, Czechoslovakia, the Soviet Union, India and Iran display a diverse range of theoretical and cultural perspectives. Carefully organized sections interrogate how classic texts have been adapted for the twenty-first century, how death has been politicized, ritualized or metaphorized, and visual strategies for representing death, and how death has been represented within the context of play. Asking how different cultures present the concept of death to children, this volume is the first to bring together a global range of perspective on death in children's literature and will be a valuable contribution to an array of disciplines. *Time and Petri Nets* Louchka

Popova-Zeugmann, 2013-11-05 At first glance the concepts of time and of Petri nets are quite contrary while time determines the occurrences of events in a system, classic Petri nets consider their causal relationships and they represent events as concurrent systems. But if we take a closer look at how time and causality are intertwined, we realize that there are many possible ways in which time and Petri nets interact. This book takes a closer look at three time-dependent Petri nets: Time Petri nets, Timed Petri nets, and Petri nets with time windows. The author first explains classic Petri nets and their fundamental properties. Then the pivotal contribution of the book is the introduction of different algorithms that allow us to analyze time-dependent Petri nets. For Time Petri nets, the author presents an algorithm that proves the behavioral equivalence of a net where time is designed once with real and once with natural numbers so we can reduce the state space and consider the integer states exclusively. For Timed Petri nets, the author introduces two time-dependent state equations providing a sufficient condition for the non-reachability of states and she also defines a local transformation for converting these nets into Time Petri nets. Finally, she shows that Petri nets with time windows have the ability to realize every transition sequence fired in the net omitting time restrictions. These classes of time-dependent Petri nets show that time alone does not change the power of a Petri net; in fact, time may or may not be used to force firing. For Time Petri nets and Timed Petri nets, we can say that they are Turing powerful and thus more powerful than classic Petri nets because there is a compulsion to fire at some point in time. By contrast, Petri nets with time windows have no compulsion to fire; their expressiveness power is less than that of Turing machines. This book derives from advanced lectures and the text is supported throughout with examples and exercises. It is suitable for graduate courses in computer science, mathematics, engineering, and related disciplines and as a reference for researchers. **Michael Ende, Momo.
