Ultra-Low Energy Domain-Specific Instruction-Set Processors Francky Catthoor, Praveen Raghavan, Andy Lambrechts, Murali Jayapala, Angeliki Kritikakou, Javed Absar, 2010-08-05 Modern consumers carry many electronic devices like a mobile phone digital camera GPS PDA and an MP3 player The functionality of each of these devices has gone through an important evolution over recent years with a steep increase in both the number of features as in the quality of the services that they provide However providing the required compute power to support an uncompromised combination of all this functionality is highly non trivial Designing processors that meet the demanding requirements of future mobile devices requires the optimization of the embedded system in general and of the embedded processors in particular as they should strike the correct balance between flexibility energy efficiency and performance In general a designer will try to minimize the energy consumption as far as needed for a given performance with a sufficient flexibility However achieving this goal is already complex when looking at the processor in isolation but in reality the

processor is a single component in a more complex system In order to design such complex system successfully critical decisions during the design of each individual component should take into account effect on the other parts with a clear goal to move to a global Pareto optimum in the complete multi dimensional exploration space In the complex global design of battery operated embedded systems the focus of Ultra Low Energy Domain Specific Instruction Set Processors is on the energy aware architecture exploration of domain specific instruction set processors and the co optimization of the datapath architecture foreground memory and instruction memory organisation with a link to the required mapping techniques or compiler steps at the early stages of the design By performing an extensive energy breakdown experiment for a complete embedded platform both energy and performance bottlenecks have been identified together with the important relations between the different components Based on this knowledge architecture extensions are proposed for all the bottlenecks

Subject Guide to Books in Print ,1993 Embedded System Design with ARM Cortex-M Microcontrollers Cem Ünsalan,Hüseyin Deniz Gürhan,Mehmet Erkin Yücel,2022-01-03 This textbook introduces basic and advanced embedded system topics through Arm Cortex M microcontrollers covering programmable microcontroller usage starting from basic to advanced concepts using the STMicroelectronics Discovery development board Designed for use in upper level undergraduate and graduate courses on microcontrollers microprocessor systems and embedded systems the book explores fundamental and advanced topics real time operating systems via FreeRTOS and Mbed OS and then offers a solid grounding in digital signal processing digital control and digital image processing concepts with emphasis placed on the usage of a microcontroller for these advanced topics The book uses C language the programming language for microcontrollers C language and MicroPython which allows Python language usage on a microcontroller Sample codes and course slides are available for readers and instructors and a solutions manual is available to instructors The book will also be an ideal reference for practicing engineers and electronics hobbyists who wish to become familiar with basic and advanced microcontroller concepts Microprocessor Architectures Henk Corporaal,1998 Exploring new trends in computer technology Corporaal introduces an innovative and exciting concept Transport Triggered Architecture TTAs Unlike most traditional architectures where programmed operations trigger internal data transports TTAs function through programming the data transports themselves As a result the new architecture alleviates bottlenecks allows for new code generation optimizations and exploits hardware more efficiently Founded on the author s recent research this book evaluates the attributes of different classes of architectures It demonstrates how TTAs can be used as a template for automatic generation of application specific processors and highlights their suitability for embedded system design Several commercial TTA implementations have proven its concepts and advantages Features includes Complexity analysis of the data path of Instruction Level Parallel processors particularly of VLIW Very Long Instruction Word and super pipelined processors Derivation of the transport triggering concept illustrating processor simplification In depth analysis of the architecture

design space of TTAs and evaluation of architecture parameters Examination of the control and pipelining of instruction function and register units Description of a trajectory for the automatic synthesis of TTAs for arbitrary applications written in a high level language Detailed description of a prototype TTA processor enabling the reader to design an embedded computer system with excellent cost performance ratio Microprocessor Architectures is cutting edge text which will prove invaluable to both industrial hardware and software engineers involved in embedded system design and to postgraduate electrical engineering and computer science students This clearly structured reference demonstrates the versatility of TTAs and explores their influential role in the next generation of computer architecture Visual Communications and Image Processing 2004 Sethuraman Panchanathan,Vasudev Bhaskaran,2004 Proceedings of SPIE present the original research papers presented at SPIE conferences and other high quality conferences in the broad ranging fields of optics and photonics These books provide prompt access to the latest innovations in research and technology in their respective fields Proceedings of SPIE are among the most cited references in patent literature Microcontrollers Kenneth J. Hintz,Daniel Tabak,1992 A complete designer s guide to microcontrollers from the 8 bit Motorola 86HC11 to Intel new 32 bit 80960CA this book includes all aspects of these devices organization application and programming Microcontrollers are a kind of microprocessor used in a vast array of applications from antilock brakes to industrial process control and robotics This book should help engineers understand these devices and design cost effective control around them Scientific and Technical Aerospace Reports ,1983 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database

Distributed Real-Time Architecture for Mixed-Criticality Systems Hamidreza Ahmadian,Roman Obermaisser,Jon Perez,2018-09-05 This book describes a cross domain architecture and design tools for networked complex systems where application subsystems of different criticality coexist and interact on networked multi core chips The architecture leverages multi core platforms for a hierarchical system perspective of mixed criticality applications This system perspective is realized by virtualization to establish security safety and real time performance The impact further includes a reduction of time to market decreased development deployment and maintenance cost and the exploitation of the economies of scale through cross domain components and tools Describes an end to end architecture for hypervisor level chip level and cluster level Offers a solution for different types of resources including processors on chip communication off chip communication and I O Provides a cross domain approach with examples for wind power health care and avionics Introduces hierarchical adaptation strategies for mixed criticality systems Provides modular verification and certification methods for the seamless integration of mixed criticality systems Covers platform technologies along with a methodology for the development process Presents an experimental evaluation of technological results in cooperation with industrial partners The information in this book will be extremely useful to industry leaders who design and manufacture products with distributed embedded systems in mixed

criticality use cases It will also benefit suppliers of embedded components or development tools used in this area As an educational tool this material can be used to teach students and working professionals in areas including embedded systems computer networks system architecture dependability real time systems and avionics wind power and health care systems
