Biological Efficacy of Natural and Chemically Modified Products against Oral Inflammatory Lesions Hiroshi

Sakagami, 2019-06-12 Oral health is general health. If the oral cavity is kept healthy, the whole body is always healthy. Bacteria in the oral cavity do not stay in the oral cavity but rather they travel throughout the body and can induce various diseases. Periodontal pathogens are involved in tooth loss. The number of remaining teeth decreases with age. People with more residual teeth can bite food well and live longer with lower incidence of dementia. There are many viruses in the oral cavity that also cause various diseases. Bacteria and viruses induce and aggravate inflammation and therefore should be removed from the oral cavity. In the natural world, there are many as yet undiscovered antiviral, antibacterial, and anti-inflammatory substances. These natural substances as well as chemically modified derivatives help our oral health and lead us to more fulfilling, high quality lives. This Special Issue entitled Biological Efficacy of Natural and Chemically Modified Products against Oral Inflammatory Lesions was written by specialists from a diverse variety of fields. It serves to provide readers with up to date information on incidence rates in each age group, etiology, and treatment of stomatitis, and to investigate the application of such treatments as oral care and cosmetic materials. Bank Liquidity and the Global Financial Crisis Laura

Chiaramonte, 2018-07-09 One of the lessons learned from the Global Financial Crisis of 2007-9 is that minimum capital requirements are a necessary but inadequate safeguard for the stability of an intermediary. Despite the high levels of capitalization of many banks before the crisis, they too experienced serious difficulties due to insufficient liquidity buffers. Thus for the first time after the GFC, regulators realized that liquidity risk can jeopardize the orderly functioning of a bank and in some cases its survival. Previously, the risk did not receive the same attention by regulators at the international level as other types of risk, including credit market and operational risks. The GFC promoted liquidity risk to a significant place in regulatory reform, introducing uniform international rules and best practices. The literature has studied the potential effects of the new liquidity rules on the behaviour of banks, the financial system, and the economy as a whole. This book provides a comprehensive understanding of the bank liquidity crisis that occurred during the GFC, of the liquidity regulatory reform introduced by the Basel Committee with the Basel III Accord, and its implications both at the micro and macroeconomic levels.

Universit  Cattolica del Sacro Cuore contributed to the funding of this research project and its publication. **Transnational Organised Crime** Tom Obokata, Brian Payne, 2016-10-04 Organised crime covers a wide range of activities including drug trafficking, illegal trafficking of people, and fraud. The existence of a land border does not impede these operations; instead, in many cases it is used to their advantage. In response, law enforcement strategies must include a transnational, multi-agency approach. This book critically analyses the extent to which Northern Ireland and the Republic of Ireland have been successful in implementing effective action against transnational organised crime. It explores the adoption of key law enforcement strategies and measures in these jurisdictions and evaluates how regional EU law and international UN Convention standards

have been implemented at the national level Drawing on interviews with over 90 stakeholders including the Department of Justice Northern Ireland the Department of Justice and Equality in Ireland the Police Service of Northern Ireland and An Garda Siochána Tom Obokata and Brian Payne discuss the factors affecting the effective prevention and suppression of organised crime particularly in relation to cross border cooperation In exploring challenges of transnational crime and cooperation this book will be of great use to students and researchers in international and transnational criminal law criminology and crime prevention

The Impact of the European Court of Justice on Neighbouring Countries Arie Reich, Hans-W. Micklitz, 2020-10-30 There is a considerable mismatch between theories on the influence of the EU outside its borders and concrete knowledge on whether and to what extent the suggested impact is of any practical relevance The aim of this book therefore is to help close that gap in the knowledge concerning the role and function of the Court of Justice of the European CJEU outside its own borders in selected countries Scholars from Armenia Azerbaijan Georgia Israel Jordan Russia Switzerland Tunisia Turkey Ukraine and the Eurasian Economic Union have researched and explored how their respective countries have been influenced by the CJEU This title looks at why along with how these decisions have been utilized All of this culminates in an effort to be able to rank the degree to which the CJEU is influencing non EU jurisdictions according to a common scale Looking across the selected countries this title analyses the research provided by the scholars This includes a brief description of the relationship and agreements between the EU and the country a concise history of the country's judiciary a full account of the extent to which the country's courts have cited CJEU judgements and an analysis of that extent and the impact they have had Other factors are explored as well such as countries who want to join the EU might aim for more legal harmonization between them and the EU These metrics are used to compare across the neighbourhood countries and draw conclusions about CJEU influence and impact outside of the EU This comprehensive edited collection is an in depth look at the actual impact of the CJEU in neighbourhood countries providing crucial information in an overlooked field of EU law

The Annalist, 1921 *Electrical World*, 1929 **Evolution of NK-mediated target recognition under the pressure of physiologic or pathologic stimuli** Massimo Vitale, Simona Sivori, Miguel López-Botet, Daniel Olive, 2015-03-23 Since their discovery NK cells have come out as potential tools to fight cancer and viruses This finding early urged different groups to study the mechanisms governing NK cell function The identification of the MHC I specific inhibitory receptors i.e. KIRs NKG2A and certain Ly49 molecules allowed defining rather rapidly how NK cells could avoid self aggression and how they could be directed towards targets that were forced by viral infection or tumor transformation to down regulate MHC I expression In a second time also the repertoire of surface activating receptors addressing NK cytotoxicity towards tumors and pathogens was mostly defined In spite of the first findings however most recent studies may suggest that NK cells and their receptors might not have been evolved to kill tumor targets and perhaps they might have been only partially influenced in their evolution by the need of recognizing viruses Indeed certain NK receptors known to

activate NK cell cytotoxicity NKp30 DNAM 1 NKp80 can also participate at regulatory interactions occurring between NK and myeloid cells In addition a peculiar NK cell subset which intensively populate decidua during the first trimester of pregnancy through the engagement of specific receptors and the interaction with decidual DC produce chemokines and pro angiogenic cytokines and induce Tregs Thus in this context NK cells favor decidua vascularization and development of the semiallogeneic foetus in a tolerant environment Viruses have nevertheless played an important role in shaping the NK cell receptor repertoire Several studies have unveiled clues of the evolutionary struggle between these pathogens and NK cells Different NK receptors including NKp46 NKp30 NKp44 NKG2D NKG2C Ly49 and certain KIRs have been demonstrated to recognize virus encoded or virus induced ligands The expression of TLR specifically recognizing microbial products together with the unexpected role of KIR3DL2 in shuttling these products to TLR containing endosomes have also been documented in NK cells On the other side different viral immune evasion molecules have been shown to interfere with the expression of ligands for T or NK cell activating receptors In addition viral infections can occur in the reproductive stage of life cycle and may represent a serious threat for the species propagation Thus the control of viruses together with the maintenance of foetus during pregnancy should represent major evolutionary forces in shaping NK receptors Along this line the NK mediated control of tumors should not be under the same evolutionary pressure as tumors mostly appear later in the life cycle and the recognition of tumor encoded ligands may be less efficient as the NK cell receptors might have not been selected for such aim This may be the reason why although displaying strong antitumor activity in vitro NK cells could hardly contain tumor burden in vivo In addition the pathogen driven evolution of NK cell function may also favor the role of NK cells in the insurgence of immune mediated diseases This research topic will collect contributions that may clarify the relationships between the evolution of the NK receptors and their role in an efficient recognition of viruses and tumor cells or in immune mediated diseases
