

CHECKS AND SERVICE

1. Engine oil level

Check the engine oil daily before starting the engine (stop engine). Wipe the oil dipstick with a clean dry rag (do not use cotton swabs). The oil level should be between the two marks on the dipstick, never below the lower mark.

The fuel injection pump and the turbocharger are lubricated automatically from the engine lubricating system.

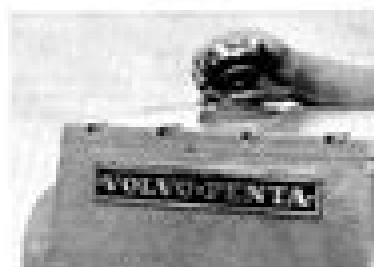

The fresh-water pump and seawater pump are lubricated during manufacture and no further lubrication is necessary.

Engine oil

Quality: CE (API), SAE, CCMC 04

For viscosity at various ambient air temperatures, see "Technical Data".

Engine	Oil capacity, approx. liter (imp. gal./US gal.) with engine induction	1"	3/4"
TAD530C TAD535C TAD540C	32 (7.5/13.2)	32 (8.4/13.8)	
TAD545C	34 (7.9/9)	34 (8.9/9.2)	

Filling cap, coolant

2. Engine coolant level

Check coolant level daily before starting.

Warning: Remove the cap carefully when the engine is hot. With a cold engine the level should be approx. 5 mm (3/16") below the sealing surface of the filler cap to enable the coolant to expand when the engine gets hot.

See pages 4-5 regarding composition of coolant.

When topping up, remember to open the venting valve at the top or at bottom form. See "Filling with coolant" on page 5. Close the vent/cap after filling.

When there is a risk of freezing the system must be drained or anti freeze should be added, see "Precautions in case of freezing" on page 5.

Venting valve,
TAD530C

Venting valve,
TAD535C

Venting valve,
TAD540C

Seawater filter

1. Cap
2. Housing with element

The seawater filter (optional equip.) should be checked and cleaned when necessary. For cleaning see page 16. The frequency depends on the experience obtained after a period of running, depending on the amount of dirt in the water.

MAINTENANCE

3. Reverse gear oil level

Check the oil level with the dipstick daily. Top up with oil when needed to the upper mark on the dipstick.

The check is carried out with the engine running at idling speed and with the lever in the "Neutral" position.

Oil grade: The same as for the engine. When lubricating oil of quality CE (according to the API system) is permitted in the reverse gear.

Viscosity: The same as for the engine. However, for the TAD5 the reverse gear only single grade oil of low viscosity number is required.

Oil viscosity, see "Technical Data".

4. Disengageable clutch

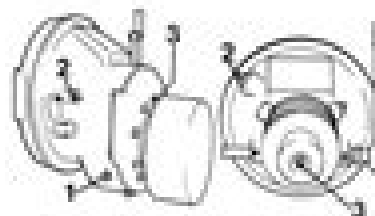

Induction gear, disengageable clutch - optional equip. item

Check the oil level every 500 hours.

The induction gear at the front of the engine is fixed with a lock plug (1). Unthread the plug and check that the oil is level with the base. Concerning oil grade and viscosity, see "Technical Data".

Lubricating, disengageable clutch

Every 500 hours: Lubricate the throw-out bearing (triple 2). Use universal grease. **Notes:** Lubricate springs. Excessive grease might find its way onto the clutch (damage and noise stopping). Grease the inner bearing (triple 3). This grease might have been deleted from some models with induction gear. Use heat resistant grease of a multipurpose type.

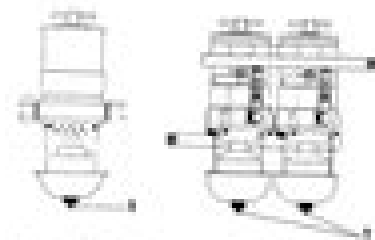

1. Lock plug 2, 3. Grease points

Disengageable clutch

5. Fuel pre-filter

(optional equipment)

Check the fuel filter and drain off any water every 500 hours by means of the draining plug (1). The check should not be carried out until the engine has been shut down for several hours and with the engine cooled. Fit the plug.

Single fuel pre-filter

Double fuel pre-filter

1. Draining plug

5. Checking the batteries

Check the level in the batteries at least after every 500 hours of operation. The level should be approx. 10 mm (3/8") above the cell plates. Top up with distilled water if necessary. Also make sure that the battery terminals are firmly tightened and greased.

Check the condition of the battery charge with a battery tester if the voltage is low.

The density of the electrolyte should be 1.26. If it has decreased to 1.22 the batteries should be re-charged. If re-charging fails to be carried out, the battery cables both + and - must first be disconnected.

Warning

The batteries contain oxyhydrogen, which is an highly explosive gas. One spark might be enough for the battery to explode and cause personal injury and material damage.

MerCruiser Volvo Penta Service Manual

Guillaume Favre

Mercruiser Volvo Penta Service Manual:

When people should go to the books stores, search opening by shop, shelf by shelf, it is truly problematic. This is why we provide the ebook compilations in this website. It will agreed ease you to look guide **Mercuriser Volvo Penta Service Manual** as you such as.

By searching the title, publisher, or authors of guide you in fact want, you can discover them rapidly. In the house, workplace, or perhaps in your method can be all best area within net connections.
