Pindyck, Daniel L. Rubinfeld, 2013 *Dynamic Games and Applications in Economics* Tamer Başar, 2012-12-06 This volume contains eleven articles which deal with different aspects of dynamic and differential game theory and its applications in economic modeling and decision making All but one of these were presented as invited papers in special sessions I organized at the 7th Annual Conference on Economic Dynamics and Control in London England during the period June 26-28 1985 The first article which comprises Chapter 1 provides a general introduction to the topic of dynamic and differential game theory discusses various noncooperative equilibrium solution concepts including Nash Stackelberg and Consistent Conjectural Variations equilibria and a number of issues such as feedback and time consistency The second chapter deals with the role of information in Nash equilibria and the role of leadership in Stackelberg problems A special type of a Stackelberg problem is the one in which one dominant player leader acquires dynamic information involving the actions of the others followers and constructs policies so called incentives which enforce a certain type of behavior on the followers Chapter 3 deals with such a class of problems and presents some new theoretical results on the existence of affine incentive policies The topic of Chapter 4 is the computation of equilibria in discounted stochastic dynamic games Here for problems with finite state and decision spaces existing algorithms are reviewed with a comparative study of their speeds of convergence and a new algorithm for the computation of nonzero sum game equilibria is presented **Study Guide, Microeconomics** Valerie Y. Pindyck, Jonathan H. Hamilton, Daniel L. Rubinfeld, 2001 [The Next Generation of Electric Power Unit Commitment Models](#) Benjamin F. Hobbs, Michael H. Rothkopf, Richard P. O'Neill, Hung-po Chao, 2006-04-11 Over the years the electric power industry has been using optimization methods to help them solve the unit commitment problem The result has been savings of tens and perhaps hundreds of millions of dollars in fuel costs Things are changing however Optimization technology is improving and the industry is undergoing radical restructuring Consequently the role of commitment models is changing and the value of the improved solutions that better algorithms might yield is increasing The dual purpose of this book is to explore the technology and needs of the next generation of computer models for aiding unit commitment decisions Because

of the unit commitment problem's size and complexity and because of the large economic benefits that could result from its improved solution considerable attention has been devoted to algorithm development in the book More systematic procedures based on a variety of widely researched algorithms have been proposed and tested These techniques have included dynamic programming branch and bound mixed integer programming MIP linear and network programming approaches and Benders decomposition methods among others Recently metaheuristic methods have been tested such as genetic programming and simulated annealing along with expert systems and neural networks Because electric markets are changing rapidly how UC models are solved and what purposes they serve need reconsideration Hence the book brings together people who understand the problem and people who know what improvements in algorithms are really possible The two fold result in *The Next Generation of Electric Power Unit Commitment Models* is an assessment of industry needs and new formulations and computational approaches that promise to make unit commitment models more responsive to those needs
