Glimpse of Light Stephen Mumford, 2017-06-29 I firmly believed there was a world outside of our own minds But all around me were challenges How could we be so sure there were such things existing apart from us Philosopher Benedict Chilwell faces a crisis of confidence and hopes to resolve it in a self imposed exile far away in the north of Norway From his cabin he begins his meditations pondering the mysteries of philosophy in the dark Arctic winter Pride a whale love and lust the Huldra God and a chain of causes all interrupt Benedict's solitude Could they prove his salvation In six days approaching the return of the light Benedict discovers a basis for certainty and tries his best to convince his hosts Through doubts questions and reasoning Chilwell inadvertently follows in Descartes footsteps Will he be killed by the cold too or will the warmth of Plato's sun save him in time

Nothing Frank Close, 2009-06-25 What is nothing What remains when you take all the matter away Can empty space a void exist This Very Short Introduction explores the science and the history of the elusive void from Aristotle who insisted that the vacuum was impossible via the theories of Newton and Einstein to our very latest discoveries and why they can tell us extraordinary things about the cosmos Frank Close tells the story of how scientists have explored the elusive void and the rich discoveries that they have made there He takes the reader on a lively and accessible history through ancient ideas and cultural superstitions to the frontiers of current research He describes how scientists discovered that the vacuum is filled with fields how Newton Mach and Einstein grappled with the nature of space and time and how the mysterious aether that was long ago supposed to permeate the void may now be making a comeback with the latest research into the Higgs field We now know

that the vacuum is far from being empty it seethes with virtual particles and antiparticles that erupt spontaneously into being and it also may contain hidden dimensions that we were previously unaware of These new discoveries may provide answers to some of cosmology s most fundamental questions what lies outside the universe and if there was once nothing then how did the universe begin ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable

Causation: A Very Short Introduction Stephen Mumford,Rani Lill Anjum,2013-11-28 Causation is the most fundamental connection in the universe Without it there would be no science or technology There would be no moral responsibility either as none of our thoughts would be connected with our actions and none of our actions with any consequences Nor would we have a system of law because blame resides only in someone having caused injury or damage Any intervention we make in the world around us is premised on there being causal connections that are to a degree predictable It is causation that is at the basis of prediction and also explanation This Very Short Introduction introduces the key theories of causation and also the surrounding debates and controversies Do causes produce their effects by guaranteeing them Do causes have to precede their effects Can causation be reduced to the forces of physics And are we right to think of causation as one single thing at all ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable
