

Chapter 1-4 ITN 100 Study Guide with complete solution

1. How can data communication networks affect businesses? - answerData communication networks can affect businesses by being the foundations for distributed systems in which information system applications are divided among a network of computers. Data communication networks facilitate more efficient use of computers and improve the day-to-day control of a business by providing faster information flow, aiding strategic competitive advantage. They also provide message transfer services to allow computer users to talk to one another via electronic mail.
2. Discuss three important applications of data communication networks in business and personal use. - answerThree important applications of data communication networks in business and personal use include email, videoconferencing, and the Internet.
3. How do LANs differ from WANs, and BNs? - answerA Local Area Network (LAN) is a group of microcomputers or terminals located in the same general area. A Backbone Network (BN) is a large central network that connects most everything on a single company site. A Metropolitan Area Network (MAN) encompasses a city or county area. A Wide Area Network (WAN) spans cities, states, or national boundaries. Typically, MANs and WANs used leased facilities, while LANs and BNs are often located internally in an organization and used owned facilities.
4. What is a circuit? - answerThe circuit is the pathway through which the messages travel. It can be made up of a copper wire, although fiber optic cable and wireless transmission are becoming more common. A circuit can also pass across many types of physical facilities such as copper wire or fiber optic cable, but the single end-to-end connection, no matter what the equipment, is referred to as the circuit. There are many devices along the circuit's path that perform special functions such as hubs, switches, routers, and gateways.
5. What is a client? - answerThe client is the input or output hardware device at the other end of a communication circuit. It typically provides remote users with access to the network and the data and software on the server.
