Neurotoxicity of Nanomaterials and Nanomedicine Xinguo Jiang,Huile Gao,2016-10-03 Neurotoxicity of Nanomaterials and Nanomedicine presents an overview of the exciting research in neurotoxicity and nanomaterials Nanomaterials have been extensively used in medicine including diagnosis probes drug carriers and embedded materials While some have been approved for clinical use most nanomaterials are waiting to be transferred from lab to clinic However the toxicity is a main barrier that restricts the translation This comprehensive book includes chapters on the most commonly used individual nanoparticles with information on the applications neurotoxicity and related mechanisms of each providing the most in depth and current information available The book examines the pathways that nanomaterials enter into and eliminate from the brain along with the strategies that could reduce the neurotoxicity of nanomaterials Providing a background to the subject detailed information and ideas for future directions in research the book is essential for students and researchers in toxicology and for those in medicine neurology pharmacology pharmaceutical science and materials science who are researching nanomaterials Presents a thorough discussion of the most common nanoparticles in the brain

and their neurotoxicology Includes the most common nanoparticles their applications and mechanisms Provides one of the first books to focus on nanomedicine and neurotoxicity **Ferroptosis in Stroke, Neurotrauma and Neurodegeneration** Anwen Shao,Zhen-Ni Guo,John Zhang,Weilin Xu,2022-03-09 Neurodegeneration: From Genetics to Molecules Victoria Campos-Peña,Marco Antonio Meraz-Ríos,Rosalinda Guevara-Guzmán,Karla Guadalupe Carvajal,2016-11-15 Chronic degenerative diseases are one of the major public health problems particularly those affecting the nervous system They are characterized by the degeneration of specific cell populations that include several pathologies which contribute significantly to morbidity and mortality in the elderly population Therefore in recent years the study of neuroscience has gained significant importance Most of these neurodegenerative disorders are the result of a complex interaction between genetic and environmental factors that generate progression and can even determine its severity The presence of mutations in genes as LRRK2 SNCA PARK7 PARK2 or PINK1 is associated with Parkinson s disease Mutations in genes such as APP PS1 and PS2 are associated with familial Alzheimer s disease while HTT gene mutations are the cause of Huntington s disease In most cases this condition is inherited in an autosomal dominant pattern which means one copy of the altered gene in each cell is sufficient to cause the disorder It is known that these mutations can also alter the proteins function however it has not yet been possible to fully understand how some genetic changes cause the disease or influence the risk of developing these disorders Most symptoms seen in these conditions occurs when specific nerve cells are damaged or die generating a loss in brain communication Also many of these mutations generate aggregation of intracellular or extracellular proteins affecting cell function and eventually causing neuronal death It is unclear whether the presence of these aggregates play an important role in nerve cell death during the development of neurodegenerative diseases or if they are simply part of the response of cells to the disease Other mutations affect the mitochondrial function generating alterations in energy production and promoting the formation of unstable molecules such as free radicals Under normal conditions the harmful effects caused by free radicals are offset within the cell However in pathological conditions the presence of mutations can alter this process by allowing the accumulation of radicals and damaging or killing cells On the other hand we also know that these diseases may not have a direct genetic component thus the study of sporadic type neurodegenerative diseases is much more complex Histopathological lesions as well as the cellular and molecular alterations are generally indistinguishable from familial cases For this reason it is important to understand the genetic and molecular mechanisms associated with this type of pathologies In this sense this issue aims to understand the molecular processes that occur in the brain and how these are influenced by the environment genetics and behavior **Principles and Practice of Movement Disorders E-Book** Joseph Jankovic,Mark Hallett,Michael S Okun,Cynthia L.
