Comprehensive Healthcare

Simulation: Emergency Medicine Christopher Strother, Yasuharu Okuda, Nelson Wong, Steven McLaughlin, 2021-02-11 This is a practical guide to the use of simulation in emergency medicine training and evaluation. It covers scenario building, debriefing and feedback and it discusses the use of simulation for different purposes including education, crisis resource management and interdisciplinary team training. Divided into five sections, the book begins with the historical foundations of emergency medicine as well as education and learning theory. In order to effectively relay different simulation modalities and technologies, subsequent chapters feature an extensive number of practical scenarios to allow readers to build a curriculum. These simulations include pediatric emergency medicine, trauma, disaster medicine and ultrasound. Chapters are also organized to meet the needs of readers who are in different stages of their education, ranging from undergraduate students to medical directors. The book then concludes with a discussion on the future and projected developments of simulation training. **Comprehensive Healthcare Simulation: Emergency Medicine** is an invaluable resource for a variety of learners from medical students, residents and practicing emergency physicians to emergency medical technicians and health-related professionals.

Benefit-Risk Assessment of Medicines James Leong, Sam Salek, Stuart Walker, 2015-04-21 This book proposes and investigates a universal framework and accompanying documentation system to facilitate and catalogue benefit-risk decisions, a valuable addition to the benefit-risk toolbox. Over the past decade, pharmaceutical companies and regulatory agencies have been reviewing the benefit-risk assessment of medicines with a view to developing a structured, systematic, standardized approach. Examining the evaluation of such an approach by several mature regulatory authorities ensures that the reader gains a unique insight into the ongoing debate in this area. The field of benefit-risk assessment continues to evolve at a rapid pace due to political and societal pressure, as is reflected in the recent FDA PUDFA agreement as well as in the EMA 2015 Roadmap. Rather than provide a comprehensive snapshot of this constantly changing environment, this book evaluates selected current approaches to benefit-risk assessment. The strengths and weaknesses of publicly available documents in communicating benefit-risk decisions to stakeholders are reviewed, and these evaluations are used to inform development of a prospective framework that could be used to harmonise procedures globally.

Human-Computer Interaction - INTERACT 2009 Tom Gross,Jan Gulliksen,Paula Kotzé,Lars Oestreicher,Philippe Palanque,Raquel Oliveira Prates,Marco Winckler,2009-08-06 INTERACT 2009 was the 12th of a series of INTERACT international c ferences supported by the IFIP Technical Committee 13 on Human Computer Interaction This year INTERACT washeld in Uppsala Sweden organizedby the Swedish Interdisciplinary Interest Group for Human Computer Interaction STIMDI in cooperation with the Department of Information Technology at Uppsala University Like its predecessors INTERACT 2009 highlighted both to the academic and to the industrial world the importance of the human computer interaction HCI area and its most recent breakthroughs on current applications Both perienced HCI researchers and

professionals as well as newcomers to the HCI field interested in designing or evaluating interactive software developing new interaction technologies or investigating overarching theories of HCI found in INTERACT 2009 a great forum for communication with people of similar interests to encourage collaboration and to learn INTERACT 2009 had Research and Practice as its special theme The reason we selected this theme is that the research within the field has drifted away from the practical applicability of its results and that the HCI practice has come to disregard the knowledge and development within the academic community
