Remote Sensing and Image Interpretation Thomas M. Lillesand, Ralph W. Kiefer, 1979. This straightforward introduction to remote sensing provides comprehensive up-to-date coverage of the subject for students irrespective of their disciplines of study or the academic department in which remote sensing is taught. All the classical elements of aerial photographic interpretation and photogrammetry are described but equal emphasis is placed on non-photographic sensing systems and the analysis of data from these systems using digital image processing procedures. Includes coverage of image restoration, enhancement, classification and data merging and new sensor systems such as the Large Format Camera, solid state linear arrays, the Shuttle Imaging radar systems, the Landsat Thematic Mapper, the SPOT satellite system and the NOAA Advanced Very High Resolution Radiometer. Also covers imaging spectrometry and lidar systems. Contains extensive illustrations.

Globalization and New Geographies of Conservation Karl S. Zimmerer, 2006-09-15 Examining the geographical dimensions of environmental management and conservation activities implemented on landscapes worldwide Globalization and New Geographies of Conservation creates a new framework and collects original case studies to explore recent developments in the interaction of humans and their environment Globalization and New Geographies of Conservation makes four important arguments about the recent coupling of conservation and globalization that is reshaping the place of nature in human environmental change First it has led to an unprecedented number of spatial arrangements whose environmental management goals and prescribed activities vary along a spectrum from strict biodiversity protection to sustainable utilization involving agriculture food production and extractive activities Conservation and globalization are also leading by necessity to new scales of management in these activities that rely on environmental science thus shifting the spatial patterning of humans and the environment This interaction results as well in the unprecedented importance of boundaries and borders transnational border issues pose both opportunities and threats to global conservation proposed by organizations and institutions that are themselves international Lastly Globalization and New Geographies of Conservation argues that the local level has been integral to globalization while the regional level is often eclipsed at the peril of the successful implementation of conservation and management programs Bridging the gap between geography and life science Globalization and New Geographies of Conservation will appeal to a broad range of students of the environment conservation planning biodiversity management and development and globalization studies
