Linde Hydraulic Control (LHC)

Digital electro-hydraulic controller

Instead of a control unit, an integrated module has taken the place of the control unit. Instead of a hydraulic controller, a computer electronic controller is used. It has a very powerful microcontroller system, all control functions for the drive unit and the working hydraulics (2).

Adaptation to various trucks

The electronic control unit is capable of controlling trucks from a variety of series and with different drive systems. To use different truck parameters and sensors, each truck model has a code that uniquely identifies the truck.

Troubleshooting

The processor of the electronic control unit analyzes analog and digital signals. The processor recognizes digital messages and system errors, and displays an error message on the display module on the seat interface. In addition, the control unit activates a variety of functions according to the error's highest priority.

- Working light flashes
- Flashing indicator of the internal communication system
- The truck brakes with automatic brake release and off the engine brake
- The main battery (in the emergency function) the internal communication system activates off
- An error code appears on the display

These functions can be activated by switching off the communication system with the key switch. Every 4 seconds, the control unit shows whether the error is still present. If the error is no longer present, the truck returns to normal operation. If the error persists, the error code appears on the display and one of the measures listed above is carried out.

Changing the controller

⚠ Warning

Prohibit independent component storage due to electrostatic discharge. Independent storage is not recommended and may cause the controller to corrupt.

The controller is equipped with a "fingerprint" which is attached to the truck's main control system. Communication takes place via CAN bus. The system unit number and the software version of the controller can be read out via the seat interface.

If the controller is replaced, the personal spare part controller must be identified and only adapted to the code function. All necessary information is available on the code function.
