Complex Analysis and Dynamical Systems Mark Agranovsky, Anatoly Golberg, Fiana Jacobzon, David Shoikhet, Lawrence Zalcman, 2018-01-31 This book focuses on developments in complex dynamical systems and geometric function theory over the past decade showing strong links with other areas of mathematics and the natural sciences Traditional methods and approaches surface in physics and in the life and engineering sciences with increasing frequency the Schramm Loewner evolution Laplacian growth and quadratic differentials are just a few typical examples This book provides a representative overview of these processes and collects open problems in the various areas while at the same time showing where and how each particular topic evolves This volume is dedicated to the memory of Alexander Vasiliev High Dimensional Probability IX Radosław Adamczak, Nathael Gozlan, Karim Lounici, Mokshay Madiman, 2023-06-05 This volume collects selected papers from the Ninth High Dimensional Probability Conference held virtually from June 15 19 2020 These papers cover a wide range of topics and demonstrate how high dimensional probability remains an active area of research with applications across many mathematical disciplines Chapters are organized around four general topics inequalities and convexity limit theorems stochastic processes and high dimensional statistics High Dimensional Probability IX will be a valuable resource for researchers in this area Hermitian-Grassmannian Submanifolds Young Jin Suh, Yoshihiro Ohnita, Jiazu Zhou, Byung Hak Kim, Hyunjin Lee, 2017-09-14 This book presents the proceedings of the 20th International Workshop on Hermitian Symmetric Spaces and Submanifolds which was held at the Kyungpook National University from June 21 to 25 2016 The Workshop was supported by the Research Institute of Real and Complex Manifolds RIRCM and the National Research Foundation of Korea NRF The Organizing Committee invited 30 active geometers of differential geometry and related fields from all around the globe to discuss new developments for research in the area These proceedings provide a detailed overview of recent topics in the field of real and complex submanifolds **Fractal Functions Communication with Fractional Calculus A.**

Gowrisankar, T. M. C. Priyanka, Santo Banerjee, 2025-09-26 This book provides an in depth examination of fractal functions focusing on their self similar structures and the relatively simple construction procedures that make them a subject of fascination in mathematics and engineering By exploring fractal interpolation functions the book sheds light on naturally occurring phenomena that exhibit irregularity and non integer dimensions offering a fresh perspective on these complex mathematical constructs The chapters cover a range of topics including the foundational principles of fractal geometry the construction of fractal functions through iterated function systems and the critical role of scaling parameters Readers will

find expert analyses of affine and non affine fractal functions as well as discussions on the application of fractional calculus methods such as the Riemann Liouville and Caputo derivatives The book also explores the practical applications of fractal interpolation in areas like epidemiology and climate dynamics demonstrating the relevance of these mathematical concepts to real world problems This volume is an essential resource for researchers and scholars in mathematics engineering and related fields It offers a comprehensive overview of the current research on fractal functions and fractional calculus providing readers with the tools to understand and apply these concepts in their work Whether you are an academic seeking to deepen your knowledge or a practitioner looking to apply fractal functions to practical challenges this book is a valuable addition to your library It invites you to engage with the latest research and explore the potential of fractal functions in addressing complex scientific and engineering problems

Martingale Hardy Spaces and Summability of One-Dimensional Vilenkin-Fourier Series Lars-Erik Persson, George Tephnadze, Ferenc Weisz, 2022-11-22 This book discusses develops and applies the theory of Vilenkin Fourier series connected to modern harmonic analysis The classical theory of Fourier series deals with decomposition of a function into sinusoidal waves Unlike these continuous waves the Vilenkin Walsh functions are rectangular waves Such waves have already been used frequently in the theory of signal transmission multiplexing filtering image enhancement code theory digital signal processing and pattern recognition The development of the theory of Vilenkin Fourier series has been strongly influenced by the classical theory of trigonometric series Because of this it is inevitable to compare results of Vilenkin Fourier series to those on trigonometric series There are many similarities between these theories but there exist differences also Much of these can be explained by modern abstract harmonic analysis which studies orthonormal systems from the point of view of the structure of a topological group The first part of the book can be used as an introduction to the subject and the following chapters summarize the most recent research in this fascinating area and can be read independently Each chapter concludes with historical remarks and open questions The book will appeal to researchers working in Fourier and more broad harmonic analysis and will inspire them for their own and their students research Moreover researchers in applied fields will appreciate it as a sourcebook far beyond the traditional mathematical domains
