Mathematics June Paper 1 Memorandum 2013:

Cognitive Communication and Cooperative HetNet Coexistence Maria-Gabriella Di Benedetto, Faouzi Bader, 2014-01-16
This book written by experts from universities and major industrial research laboratories is devoted to the very hot topic of cognitive radio and networking for cooperative coexistence of heterogeneous wireless networks. Selected highly relevant advanced research is presented on spectrum sensing and progress toward the realization of accurate radio environment mapping, biomimetic learning for self-organizing networks, security threats with a special focus on primary user emulation, attack and cognition as a tool for green next generation networks. The research activities covered include work undertaken within the framework of the European COST Action IC0902 which is geared towards the definition of a European platform for cognitive radio and networks. Communications engineers, R D engineers, researchers and students will all benefit from this complete reference on recent advances in wireless communications and the design and implementation of cognitive radio systems and networks. *Studies in Intelligence*, 2016. The Mathematical-Function Computation Handbook Nelson H.F. Beebe, 2017-08-20. This highly comprehensive handbook provides a substantial advance in the computation of elementary and special functions of mathematics, extending the function coverage of major programming languages well beyond their international standards, including full support for decimal floating point arithmetic. Written with clarity and focusing on the C language, the work pays extensive attention to little understood aspects of floating point and integer arithmetic and to software portability as well as to important historical architectures. It extends support to a future 256 bit floating point format offering 70 decimal digits of precision. Select Topics and Features references an exceptionally useful author-maintained MathCW website containing source code for the book's software, compiled libraries for numerous systems, pre-built C compilers and other related materials. Offers a unique approach to covering mathematical function computation using decimal arithmetic, provides extremely versatile appendices for interfaces to numerous other languages: Ada, C, C++, Fortran, Java and Pascal. Presupposes only basic familiarity with computer programming in a common language as well as early level algebra. Supplies a library that readily adapts for existing scripting languages with minimal effort, supports both binary and decimal arithmetic in up to 10 different floating point formats, covers a significant portion with highly accurate implementations of the U.S. National Institute of Standards and Technology's 10-year project to codify mathematical functions. This highly practical text reference is an invaluable tool for advanced undergraduates, recording many lessons of the intermingled history of computer hardware and software, numerical algorithms and mathematics. In addition, professional numerical analysts and others will find the handbook of real interest and utility because it builds on research by the mathematical software community over the last four decades. Drawing Futures Bob Sheil,Frédéric Migayrou,Luke Pearson,Laura Allen,2016-11-11 Drawing Futures brings together international designers and artists for speculations in contemporary drawing for art and architecture Despite numerous developments in technological manufacture and computational design that provide new grounds for designers the act of drawing still plays a central role as a vehicle for speculation There is a rich and long history of drawing tied to innovations in technology as well as to revolutions in our philosophical understanding of the world In reflection of a society now underpinned by computational networks and interfaces allowing hitherto unprecedented views of the world the changing status of the drawing and its representation as a political act demands a platform for reflection and innovation Drawing Futures will present a compendium of projects writings and interviews that critically reassess the act of drawing and where its future may lie Drawing Futures focuses on the discussion of how the field of drawing may expand synchronously alongside technological and computational developments The book coincides with an international conference of the same name taking place at The Bartlett School of Architecture UCL in November 2016 Bringing together practitioners from many creative fields the book discusses how drawing is changing in relation to new technologies for the production and dissemination of ideas
