Dobkin,2003 The Second Edition of this single authored volume integrates multiple disciplines of basic and clinical research to help clinicians further develop the best possible care for the rehabilitation of patients with neurologic diseases From the readable descriptions of the structures and functions of pathways for movement and cognition the reader comes to understand the potential for training induced pharmacologic and near future biologic interventions to enhance recovery Dr Dobkin shows how functional neuroimaging serves as a marker for

whether physical cognitive and neuromodulating therapies work and how they sculpt the plasticity of the brain Themes such as how the manipulation of sensory experience can serve as a formidable tool for rehabilitation run throughout the text built from the level of the synapse to behaviors such as grasping walking and thinking From illustrating how we may one day repair the brain and spinal cord to how to retrain spared and new pathways Dr Dobkin draws insights from a broad swath of fundamental research to give clinicians tools they can translate into bedside practices The book treats the medical complications and therapeutic approaches to neurologic diseases as an interconnected matrix The management of common medical issues impairments and disabilities are described across diseases Special problems posed by patients with stroke myelopathies brain injury multiple sclerosis degenerative diseases and motor unit disorders receive individual comment Short term and delayed pulse interventions for patients along with clinical trials are dissected and put into perspective The First Edition of this book was titled Neurologic Rehabilitation The title has been changed to reflect Dr Dobkin's sense that fundamental research now drives the field of neurologic rehabilitation even more than it could in 1996 when the First Edition was published The Second Edition features entirely new chapters on functional neuroimaging of recovery neurostimulators and neuroprostheses integration into the book of many new clinical and neuroscientific observations relevant to the clinician and extensive updating and expansion of all chapters Readers whether clinicians serving the rehabilitation team or students or researchers in neuroscience neurology physical medicine allied health or bioengineering will acquire new insights and tools for creative pursuits that aim to lessen the disabilities of patients

Carr, Roberta B. Shepherd, 2010-07-12 The Pageburst™ E Only version of this title gives you access to the complete book content electronically Pageburst™ enhances learning by not only bringing world class content to your fingertips but also letting you add to it annotate it and categorize it all in a way that suits you Pageburst™ frees you to spend more time learning and less time searching Janet Carr and Roberta Shepherd head up a new team of eminent authors for the second edition of this definitive text on neurological physiotherapy In the first edition the authors described a model of neurological rehabilitation for individuals with motor dysfunction based on scientific research in the areas of neuromuscular control biomechanics motor skill learning and the link between cognition and action together with developments in pathology and adaptation The new edition continues to advance this model while identifying and incorporating the many advances that have occurred in the last decade in the understanding and treatment of adults with neurological conditions whether caused by accident or disease Among these advances is the knowledge that the brain retains a plastic potential to reorganize even in old and or lesioned brains and that neural plasticity can be influenced by task related mental and physical practice in a stimulating environment There is also an increasing body of knowledge related to the musculoskeletal system's adaptability and the need to prevent length and stiffness related changes in muscle contractility together with loss of aerobic fitness and endurance There is an expanding body of clinical research that appears to support the model provided here The training

guidelines outlined in Neurological Rehabilitation are based on biomechanical constructs and motor relearning research applied to enhance brain reorganization and muscle contractility and encourage functional recovery of the patient. It connects science and clinical practice enabling students and practitioners to develop their knowledge and use new clinical methods based on modern scientific understanding. Please note that this version is the Pageburst ebook only and does not include the printed textbook. Alternatively, you can purchase the printed book with access to Pageburst included; this gives you both the printed and the electronic version together. All chapters have been revised, some with the collaboration of five specialists who are engaged in high-level scientific research and clinical practice. Biomechanical models are presented to provide a framework for action-specific training and exercise to improve performance. Clinical guidelines are science and evidence-based. Emphasis is on new approaches to the delivery of neurological rehabilitation that increase the time spent in mental and physical activity and the intensity of practice and exercise. Up-to-date referencing.

Analysis of Admission, Discharge, and Follow-up of Stroke Patients Utilizing an Objective Motor Assessment Scale Julie Echsner, 1985 Contemporary Management of Motor Control Problems, 1991 **Scales and Scores in Neurology** Harald Masur, 2004. This book reviews practically all scales and scores that are currently used in clinical neurology to detect neurologic deficits, assess risks and prognosis, and evaluate response to long-term medical therapies. It distinguishes commonly used scales and scores from those that are used infrequently, providing expert commentaries on each.
