

Chapter 26 Sound

Exercises

26.1 The Origin of Sound (page 515)

Match each sound source with the part that vibrates.

Sound Source	Vibrating Part
<u>a</u> 1. violin	a. strings
<u>b</u> 2. your voice	b. reed
<u>d</u> 3. saxophone	c. column of air at the mouthpiece
<u>c</u> 4. flute	d. vocal chords
5. Sound waves are a type of <u>longitudinal</u> wave.	
6. What normally determines the frequency of sound waves? <u>The frequency of sound waves produced normally have the same frequency as the vibrating source.</u>	
7. Define pitch. <u>Pitch is our subjective impression about the frequency of sound.</u>	
8. As people grow older, they often have more trouble hearing sounds at the <u>high</u> end of the range of frequencies.	
9. Sound waves with frequencies below the normal range are <u>infrasonic</u> waves.	
10. Sound waves with frequencies above the normal range are <u>ultrasonic</u> waves.	

26.2 Sound in Air (pages 515–517)

11. Is the following sentence true or false? Sound vibrates the air much like particles move back and forth along a stretched spring. true
12. A pulse of compressed air is called a compression, and a pulse of low-pressure air is called a rarefaction.
13. For all wave motion, it is not the medium that travels, but a pulse that travels.
14. Explain what happens when a tuning fork is struck against one end of an open tube.
When the prong is struck, a compression enters the tube. When the prong swings away, a rarefaction follows the compression. A series of compressions and rarefactions is produced within the tube as the fork continues to vibrate.

26.3 Media That Transmit Sound (page 517)

15. What did Native Americans learn long ago when they put their ears to the ground?
They could hear the hoofbeats of distant horses through the ground before they could hear them through the air.

Einstein's general theory of relativity is introduced in this advanced undergraduate textbook Topics covered include geometric formulation of special relativity the principle of equivalence Einstein's field equation and its spherical symmetric solution as well as cosmology **Optics in Our Time** Mohammad D. Al-Amri, Mohamed El-Gomati, M. Suhail

Zubairy, 2016-12-12 Light and light based technologies have played an important role in transforming our lives via scientific contributions spanned over thousands of years In this book we present a vast collection of articles on various aspects of light and its applications in the contemporary world at a popular or semi popular level These articles are written by the world authorities in their respective fields This is therefore a rare volume where the world experts have come together to present the developments in this most important field of science in an almost pedagogical manner This volume covers five aspects related to light The first presents two articles one on the history of the nature of light and the other on the scientific achievements of Ibn Haitham Alhazen who is broadly considered the father of modern optics These are then followed by an article on ultrafast phenomena and the invisible world The third part includes papers on specific sources of light the discoveries of which have revolutionized optical technologies in our lifetime They discuss the nature and the characteristics of lasers Solid state lighting based on the Light Emitting Diode LED technology and finally modern electron optics and its relationship to the Muslim golden age in science The book's fourth part discusses various applications of optics and light in today's world including biophotonics art optical communication nanotechnology the eye as an optical instrument remote sensing and optics in medicine In turn the last part focuses on quantum optics a modern field that grew out of the interaction of light and matter Topics addressed include atom optics slow stored and stationary light optical tests of the foundation of physics quantum mechanical properties of light fields carrying orbital angular momentum quantum communication and Wave Particle dualism in action College Physics Jerry D. Wilson, 2000 How Things Work Louis Bloomfield, 2001

HOW THINGS WORK is about ordinary objects and the physics concepts that make them possible Its cover illustrates how often waves appear in our world While ocean surf is clearly an example of waves p 250 so is the light from the lighthouse the rippling motion of the guitar strings and the sound emerging from the CD in its player When you pluck a guitar song you fill it with waves The strength of these waves and the timbre of the resulting sound depend upon where and how you plucked the

string and on the structure of the guitar itself You can distinguish a guitar from a piano or help by listening for the unique mixture of waves on its strings p 242 A lighthouse uses an enormous lens to bend light waves from its lamp into a narrow beam that sailors can see for a hundred kilometers A large diameter lens is needed because waves leaving a small diameter lens spread outward like ripples on a pond and can't stay together as a bright narrow beam p 427 A CD encodes the air pressure fluctuations in sound waves as a pattern of tiny pits on its shiny surface The CD player reads these pits with a laser to reproduce the recorded sound Arcs of audio and error recovery information are arranged in a spiral around the disk's center so that a scratch outward from the middle of the disk is unlikely to cause any noticeable loss of music p 424
