Lighting Design A Perception Based Approach:

Lighting Design Christopher Cuttle, 2015-03-05 By reading this book you will develop the skills to perceive a space and its contents in light and be able to devise a layout of luminaires that will provide that lit appearance Written by renowned lighting expert Christopher Kit Cuttle the book explains the difference between vision and perception which is the distinction between providing lighting to make things visible and providing it to influence the appearance of everything that is visible demonstrates how lighting patterns generated by three dimensional objects interacting with directional lighting are strongly influential upon how the visual perception process enables us to recognize object attributes such as lightness colourfulness texture and gloss reveals how a designer who understands the role of these lighting patterns in the perceptual process may employ them either to reveal or to subdue or to enhance the appearance of selected object attributes by creating appropriate spatial distributions of light carefully explains calculational techniques and provides easy to use spreadsheets so that layouts of lamps and luminaires are derived that can be relied upon to achieve the required illumination distributions Practical lighting design involves devising three dimensional light fields that create luminous hierarchies related to the visual significance of each element within a scene By providing you with everything you need to develop a design concept from the understanding of how lighting influences human perceptions of surroundings through to engineering efficient and effective lighting solutions Kit Cuttle instills in his readers a new found confidence in lighting design
