Interpolation for Normal Bundles of General Curves Atanas Atanasov, Eric Larson, David Yang, 2019-02-21 Given n general points p_1, p_2, \dots, p_n in \mathbb{P}^r it is natural to ask when there exists a curve C in \mathbb{P}^r of degree d and genus g passing through p_1, p_2, \dots, p_n In this paper the authors give a complete answer to this question for curves C with nonspecial hyperplane section This result is a consequence of our main theorem which states that the normal bundle N_C of a general nonspecial curve of degree d and genus g in \mathbb{P}^r with $d \geq g + r$ has the property of interpolation i.e. that for a general effective divisor D of any degree on C either $H^0(N_C(D)) > 0$ or $H^1(N_C(D)) > 0$ with exactly three exceptions

The Bounded and Precise Word Problems for Presentations of Groups S. V. Ivanov,2020-05-13 The author introduces and studies the bounded word problem and the precise word problem for groups given by means of generators and defining relations For example for every finitely presented group the bounded word problem is in NP i e it can be solved in nondeterministic polynomial time and the precise word problem is in PSPACE i e it can be solved in polynomial space The main technical result of the paper states that for certain finite presentations of groups which include the Baumslag Solitar one relator groups and free products of cyclic groups the bounded word problem and the precise word problem can be solved in polylogarithmic space As consequences of developed techniques that can be described as calculus of brackets the author obtains polylogarithmic space bounds for the computational complexity of the diagram problem for free groups for the width problem for elements of free groups and for computation of the area defined by polygonal singular closed curves in the plane The author also obtains polynomial time bounds for these problems
