Parametric Framework for Modelling of Bioelectrical Signals Yar M. Mughal, 2016-01-05 This book examines non invasive electrical based methods for disease diagnosis and assessment of heart function In particular a formalized signal model is proposed since this offers several advantages over methods that rely on measured data alone By using a formalized representation the parameters of the signal model can be easily manipulated and or modified thus providing mechanisms that allow researchers to reproduce and control such signals In addition having such a formalized signal model makes it possible to develop computer tools that can be used for manipulating and understanding how signal changes result from various heart conditions as well as for generating input signals for experimenting with and evaluating the performance of e g signal extraction methods The work focuses on bioelectrical information particularly electrical bio impedance EBI Once the EBI has been measured the corresponding signals have to be modelled for analysis This requires a structured approach in order to move from real measured data to the model of the corresponding signals This book proposes a generic framework for this procedure It can be used as a guide for modelling impedance cardiography ICG and impedance respirography IRG signals as well as for developing the corresponding bio impedance signal simulator BISS

Reliability Engineering for Industrial Processes P. K. Kapur, Hoang Pham, Gurinder Singh, Vivek Kumar, 2024-04-22 This book explores how transformative changes driven by the new age economy can bring about improvements in a company s engineering and manufacturing capabilities The new age economy is driven by advanced engineering and manufacturing practices processes and technologies including the Internet of Things IoT Cloud Computing Blockchain Artificial Intelligence Robotics Cyber Physical Systems CPS and Internet enabled systems to automate industrial processes Today s business dynamics are governed by uncertainties disruptions complexities and ambiguities that demand quicker and more intelligent decisions These changes could relate a renaissance in the company s engineering and manufacturing capabilities To sustain these volatile and ever changing business dynamics Industry 4 0 and 5 0 have revolutionized how organizations operate and make intelligent business decisions Moreover the extensive role of business analytics has overcome the limitations of classical computing through new technologies and intelligent computing methodologies Over the past few years much emphasis has been given to investing in developing hardware and programming frameworks for achieving computational intelligence using fuzzy logic evolutionary computation neural networks probabilistic methods and learning theory Within this frame of reference the reliability quality and maintenance of complex industrial and manufacturing systems are essential for organizations to utilize them successfully for informed decisions This book focuses on studies that provide new solutions for system reliability quality security and
