Curriculum Style and English Language Kevin Piper, 1983 Intended for English teachers and administrators involved in curriculum design this monograph describes the Language Learning Project an investigation into current school practices in the teaching of English language in the Australian junior secondary school with particular reference to teaching directed toward the attainment of language competence Following an introduction to the project the report is presented in two parts The first part uses the data from the case study schools to provide an overview of current curriculum practices in the teaching of English language in the junior secondary school The second part examines the applicability of the concept of curriculum style to English language instruction and develops a typology of curriculum style based on current practices in the case study schools The teacher and student instruments used in the study are appended HTH

Special Educational Needs in the Primary School

Jean Gross, 2002 Reviews of the first two editions extraordinarily rich in ideas an essential buy TES an excellent clearly written work which is full of practical advice and presented in an easily readable manner This book is a highly recommended read Do buy it and see Support for Learning has proved especially influential at practitioner level never failing to offer a balanced assessment British Journal of Special Education I have a comprehensive library of books on special educational needs but I use this one more than any other because I find it readable practical and accessible It is a useful and informative book both to read cover to cover and to dip into Although it is based on sound theoretical knowledge it is clear that Jean Gross is writing from her own experience as a teacher and SEN practitioner TES Recent legislation and cutbacks to central support services mean that the responsibility for meeting special educational needs is resting ever more squarely on the shoulders of ordinary classroom teachers Yet few feel wholly confident in their ability to adapt work within the national curriculum to meet the whole range of needs or coordinate successful individual education plans for children who for whatever reason are not learning as well as they might This book will increase that confidence Aimed at busy class teachers special needs coordinators heads and teachers in training it shows how the teacher can build differentiation into planning lessons and schemes of work It describes workable strategies for managing the most common behaviour difficulties and meeting special needs in language literacy and mathematics At a whole school level it offers practical guidance on reviewing special needs policies assessment record keeping and the management of roles and resources The focus is on the way in which schools can do a good job in meeting special needs themselves within the everyday constraints of time money and energy and in so doing provide genuinely inclusive opportunities for all children This edition has been comprehensively updated and rewritten to cover the revised SEN Code of Practice and related legislation new directions in inclusion and all the major curriculum initiatives now in place in primary schools

Register of Educational Research in the United Kingdom, 1981 **Introduction to Special Education Assessment** Carol Jean Gearheart, 1990 *Experiencing School Mathematics* Jo Boaler, 1997 This is the first book of its kind to provide direct evidence for the effectiveness of traditional and progressive teaching methods It reports on careful and extensive case studies of two schools which taught mathematics in totally different ways Three hundred students were followed over three years and the interviews that are reproduced in the book give compelling insights into what it meant to be a student in the classrooms of the two schools The different school approaches are compared and analyzed using student interviews lesson observations questionnaires given to students and staff and a range of different assessments including GCSE examinations Questions are raised about the effectiveness of different teaching methods in preparing students for the demands of the real world and the 21st century the impact of setted and mixed ability teaching upon student attitude and achievement and gender and learning styles New evidence is provided for each of these issues The book draws some radical new conclusions about the ways that traditional teaching methods lead to limited forms of knowledge that are ineffective in non school settings The book will be essential reading for math teachers
