Hitting Probabilities for Nonlinear Systems of Stochastic Waves Robert C. Dalang, Marta Sanz-Solé, 2015-08-21 The authors consider a d dimensional random field $u_t(x)$ that solves a non linear system of stochastic wave equations in spatial dimensions $k = 1, 2, 3$ driven by a spatially homogeneous Gaussian noise that is white in time They mainly consider the case where the spatial covariance is given by a Riesz kernel with exponent Using Malliavin calculus they establish upper and lower bounds on the probabilities that the random field visits a deterministic subset of \mathbb{R}^d in terms respectively of Hausdorff measure and Newtonian capacity of this set The dimension that appears in the Hausdorff measure is close to optimal and shows that when $d \geq k + 1$ points are polar for u Conversely in low dimensions d points are not polar There is however an interval in which the question of polarity of points remains open **Social Robots in Education** Georgios
