Effective Math Instruction Jared Dupree, 2016-02-01 This easy to use classroom resource provides a series of lessons templates and exemplars for practical classroom application and will help teachers understand the content standards and the mathematical practice standards in order to develop meaningful mathematics lessons This book primarily focuses on teachers procedural knowledge of standards implementation as they apply the information and resources presented in this book Mathematical rigor in the classroom for students includes lessons that target conceptual knowledge procedural knowledge factual knowledge meta cognitive knowledge and the application of this knowledge in context It also includes opportunities for teachers to develop all three dimensions of rigor as it applies to the Common Core Mathematics and Transition to School Bob Perry, Amy MacDonald, Ann Gervasoni, 2015-01-09 This edited book brings together for the first time an international collection of work focused on two important aspects of any young child's life learning mathematics and starting primary or elementary school The chapters take a variety of perspectives and integrate these two components in sometimes explicit and sometimes more subtle ways The key issues and themes explored in this book are the mathematical and other strengths that all participants in the transition to school bring to this period of a child's life the opportunities provided by transition to school for young children's mathematics learning the importance of partnerships among adults and among adults and children for effective school transitions and mathematics learning and teaching the critical impact of expectations on their mathematics learning as children start school the importance of providing children with meaningful challenging and relevant mathematical experiences throughout transition to school the entitlement of children and educators to experience assessment and instructional pedagogies that match the strengths of the learners and the teachers the importance for the aspirations of children families communities educators and educational organisations to be recognised as legitimate and key determinants of actions experiences and successes in both transition to school and mathematics learning and the belief that young children are powerful mathematics learners who can demonstrate this power as they start school In each chapter authors reflect on their work in the area of mathematics and transition to school place that work within the overall context of research in these fields predict the trajectory of this work in the future and consider the implications of the work both theoretically and practically **Must Inclusion be Special?** Jonathan Rix, 2015-06-05 **Must Inclusion be Special** examines the discord between special and inclusive education and why this discord can only be resolved when wider inequalities within mainstream education are confronted It calls for a shift in our approach to provision from seeing it as a conglomeration of individualised needs to identifying it as a conglomeration of collective needs The author examines the political medical and cultural tendency of current times to focus upon the individual and contrasts this with the necessity to focus on context This book distinguishes the theoretical perspectives that are often associated with special or inclusive education and the broad range of interests which depend upon their ongoing development This examination leads to a

problematisation of mainstream education provision our understanding of why social inequities emerge and how additional support can overcome these inequities Further chapters explore the underlying challenges which emerge from our use and understanding of the notions of special and inclusive outlining an alternative approach based upon a community of provision This approach recognises the interconnectedness of services and the significance of context and it encapsulates the aspiration of much international legislation for participation and inclusion for all But it also assumes that we tend towards diffuse practices services policies settings and roles spread across provision which is variously inclusive and exclusionary In seeking to create equitable participation for all support needs to shift its focus from the individual to this diffuse network of contexts Must Inclusion be Special emerges from the research base which problematises inclusion and special education drawing upon examples from many countries It also refers to the author s research into pedagogy language and policy and his experiences as a teacher and the parent of a child identified with special educational needs
