that focus on human performance and the adequacy of human performance in these contexts raters were asked to focus on the knowledge and skills that underlie competent performance Researchers also examined applications that focus on the impact of environmental agents on life and the ecology in these cases raters began with the knowledge that more or less of a substance is better and as for NAEP the judgment task was to determine how good is good enough They wished to examine parallels in the objectives empirical grounding judgmental requirements and policy tensions for standard setting in NAEP and in other domains These papers were commissioned to examine the current state of affairs and residual issues with respect to achievement level setting in NAEP and to help determine whether the models and methods used in other disciplines have useful application to education It is important to note that the papers represent the authors views not necessarily those of the committee or National Research Council This issue and the workshop discussion point out a number of analogies between the objectives requisite data judgment requirements and policy issues for NAEP and other applications The editors hope that this issue and wide distribution of these papers will prompt others to join in this interesting analysis and debate
