Mathematics Paper 1 March 2014 Memo

Bruce Schneier

Mathematics Paper 1 March 2014 Memo:

Equivalence Amanda L. Golbeck, 2017-04-28 Equivalence Elizabeth L. Scott at Berkeley is the compelling story of one pioneering statistician's relentless twenty-year effort to promote the status of women in academe and science. Part biography and part microhistory, the book provides the context and background to understand Scott's masterfulness at using statistics to help solve societal problems. In addition to being one of the first researchers to work at the interface of astronomy and statistics and an early practitioner of statistics using high-speed computers, Scott worked on an impressively broad range of questions in science, from whether cloud seeding actually works to whether ozone depletion causes skin cancer. Later in her career, Scott became swept up in the academic women's movement. She used her well-developed scientific research skills together with the advocacy skills she had honed in such activities as raising funds for Martin Luther King Jr. and keeping Free Speech Movement students out of jail toward policy making that would improve the condition of the academic workforce for women. The book invites the reader into Scott's universe, a window of inspiration made possible by the fact that she saved and dated every piece of paper that came across her desk.

Click Here to Kill Everybody Bruce Schneier, 2018-09-04 Sober, lucid, and often wise. Nature: The Internet is powerful, but it is not safe. As smart devices proliferate, the risks will get worse unless we act now. From driverless cars to smart thermostats, from autonomous stock trading systems to drones equipped with their own behavioral algorithms, the Internet now has direct effects on the physical world. Forget data theft; cutting-edge digital attackers can now literally crash your car's pacemaker and home security system, as well as everyone else's. In *Click Here to Kill Everybody*, best-selling author Bruce Schneier explores the risks and security implications of our new hyper-connected era and lays out common-sense policies that will allow us to enjoy the benefits of this omnipotent age without falling prey to the consequences of its insecurity.
