Methodologies And Results In Grapevine Research:

Methodologies and Results in Grapevine Research Serge Delrot, Hipólito Medrano, Etti Or, Luigi Bavaresco, Stella Grando, 2010-10-19 Grapevine is a crop of major economical interest and wine represents a multicultural heritage which has been growing since several milleniums Yet modern viticulture must face several challenges Global climate has increased berry sugar content and alcohol in the wine whereas phenolic and aromatic ripeness are not always achieved Water supply is becoming shorter New varieties better adapted to new climatic conditions might have to be planted which may affect wine typicity Phytochemical treatments are more controlled and the consumer pays increasing attention to environmentally safe practices New methods reducing pesticide use but maintaining yield and typicity must be designed The present book illustrates the recent progress made in ecophysiology molecular and cell biology and pathology of grapevine as well as in precision viticulture and berry composition Combination of these new tools with field observations will undoubtedly make it easier to face the challenges described above These multidisciplinary contributions will be of interest to anyone involved in grapevine and wine activities

Virtual Plants: Modeling Plant Architecture in Changing Environments Katrin Kahlen, Hartmut Stützel, 2017-02-07 Plant architecture is a major determinant of the resource use efficiency of crops The architecture of a plant shows ontogenetic structural changes which are modified by multiple environmental factors Plant canopies are exposed to natural fluctuations in light quantity and the dynamically changing canopy architecture induces local variations in light quality Changing temperature conditions or water availability during growth additionally affect plant architecture and thus crop productivity because plants have various options to adapt their architecture to the available resources Meeting the challenge of ensuring food security we must understand the plant s mechanisms for integrating and responding to an orchestra of environmental factors Virtual plants describe plant architecture in silico Virtual plants have the potential to help us understanding the complex feedback processes between canopy architecture multiple environmental factors and crop productivity As a research tool they have become increasingly popular within the last decade due to their great power of realistically visualizing the plant s architecture This Research Topic highlights current research carried out on modeling plant architecture in changing environments

Management Laureates Arthur G. Bedeian, 2018-04-17 First published in 1992 This volume compiles the autobiographies of the management discipline s most distinguished laureates Prior to this publication the available management literature provided little insight into the personal and intellectual lives the frustrations as well as the triumphs of the individuals in the management discipline Although such understanding could be conveyed in many forms perhaps the most intimate and fascinating of these for gaining behind the scenes insights is the autobiography Thus the autobiographies in this volume as in the five companion volumes offer the reader not only a glimpse of the subjective determinants and personal experiences of the management discipline s most distinguished laureates but also a deeper understanding of what management is and what it is becoming The various accounts reflect a diversity of

approaches interests and experiences *UAS-Remote Sensing Methods for Mapping, Monitoring and Modeling Crops* Francisco Javier Mesas Carrascosa, Joaquim João Sousa, 2021-04-22 The advances in unmanned aerial vehicle UAV platforms and onboard sensors in the past few years have greatly increased our ability to monitor and map crops The ability to register images at ultrahigh spatial resolution at any moment has made remote sensing techniques increasingly useful in crop management These technologies have revolutionized the way in which remote sensing is applied in precision agriculture allowing for decision making in a matter of days instead of weeks However it is still necessary to continue research to improve and maximize the potential of UAV remote sensing in agriculture This Special Issue of Remote Sensing includes different applications of UAV remote sensing for crop management covering RGB multispectral hyperspectral and light detection and ranging LiDAR sensor applications aboard UAVs The papers reveal innovative techniques involving image analysis and cloud points However it should be emphasized that this Special Issue is a small sample of UAV applications in agriculture and that there is much more to investigate *Theory and Method in Higher Education Research* Malcolm Tight, Jeroen Huisman, 2015-09-29 Theory and Method in Higher Education contains contributions to international debates regarding the application and development of theory and methodology in researching higher education *Internet Research Annual* Mia Consalvo, Nancy Baym, Jeremy Hunsinger, Klaus Bruhn Jensen, 2004 Internet Research Annual offers a selection of the best work presented at the first three conferences of the Association of Internet Researchers and provides a useful overview of the cutting edge in Internet studies Established scholars and new researchers address issues such as communities on off line the Internet as a methodological tool and space for research and the places politics and policies of the Internet creating a volume that comprehensively covers the field of Internet research Also included are a brief history of the organization a list of previously published papers from the conferences and works by several of the keynote speakers including Phil Agre Barbara Warnick Bill Dutton Sheizaf Rafaeli Susan Herring Robin Mansell and much more

Cryopreservation Biotechnology in Biomedical and Biological Sciences Yusuf Bozkurt, 2018-12-12 Cryopreservation has many biotechnological applications in different fields This has led to an increase in importance of cryobiology as a science that examines the effect of ultra low temperatures on cells tissues organs and organisms and also the freezability of these structures while maintaining their viability Nowadays it is well known that this form of biotechnology can be used to solve a lot of problems such as human infertility life threatening diseases preservation of gametes and DNA and also biodiversity conservation Cryopreservation Biotechnology in Biomedical and Biological Sciences describes principles and application of cryopreservation biotechnology in different research areas and includes seven chapters that have been written by experts in their research fields The chapters included in this book are thought to improve the current understanding of the different areas of using cryopreservation biotechnology *Journal of Grapevine Research* , 2019 **Precision agriculture '25** John V.
