contributors About the editors     *Moody's OTC Industrial Manual* ,1992 Companies traded over the counter or on regional  
conferences     *Scientific and Technical Aerospace Reports* ,1977     *Energy Efficiency in Buildings* José Manuel  
Andújar,Sergio Gómez Melgar,2020-04-28 Buildings are one of the main causes of the emission of greenhouse gases in the  
world Europe alone is responsible for more than 30% of emissions or about 900 million tons of CO2 per year Heating and air  
conditioning are the main cause of greenhouse gas emissions in buildings Most buildings currently in use were built with  
poor energy efficiency criteria or depending on the country and the date of construction none at all Therefore regardless of  
whether construction regulations are becoming stricter the real challenge nowadays is the energy rehabilitation of existing  
buildings It is currently a priority to reduce or ideally eliminate the waste of energy in buildings and at the same time supply  
the necessary energy through renewable sources The first can be achieved by improving the architectural design  
construction methods and materials used as well as the efficiency of the facilities and systems the second can be achieved  
through the integration of renewable energy wind solar geothermal etc in buildings In any case regardless of whether the  
energy used is renewable or not the efficiency must always be taken into account The most profitable and clean energy is  
that which is not consumed     **Power** ,1984     **Government reports annual index** ,199?     Security Owner's Stock
