

Mathematical Modeling

Mathematical modeling is the process of using mathematics to solve real-world problems. This process can be broken down into three steps:

1. **Construct the mathematical model**, a problem whose solution will provide information about the real-world problem. (We will do this on our calculator using regression analysis.)
2. **Solve** the mathematical model.
3. **Interpret** the solution to the mathematical model in terms of the original real-world problem.
