**LOGICAL MINING OF ECONOMIC MEASUREMENT** Dong Qiu,Dongju Li,2019-09-04 As one of the critiques of contemporary economic statistics this corpus mainly queries the Report by the Committee on the Measurement of Economic Performance and Social Progress headed by J E Stiglitz The Report can be divided into three parts classical GDP issues quality of life and sustainable development and environment This corpus analyzes the necessity especially the feasibility of systematic revolution in economic measurement and points out the logical break between measurement issues and solutions This is a common economic measurement problem facing mankind at present so we cannot emphasize the quantitative analysis of empirical evidence while are extremely contemptuous of the basis of economic statistics Otherwise the data obtained from the deeper model will lose its real and clear economic significance which is a common fault of contemporary economics and economic statistics has great potential This corpus is suitable for those who are engaged in or

interested in empirical analysis of economic statistics It can be read by postgraduates and undergraduates majoring in economics and management It can also be used as a reference for teachers engaged in economics teaching     Mechanizing Hypothesis Formation Jan Rauch,Milan Šimůnek,David Chudán,Petr Máša,2022-10-20 Mechanizing hypothesis formation is an approach to exploratory data analysis Its development started in the 1960s inspired by the question can computers formulate and verify scientific hypotheses The development resulted in a general theory of logic of discovery It comprises theoretical calculi dealing with theoretical statements as well as observational calculi dealing with observational statements concerning finite results of observation Both calculi are related through statistical hypotheses tests A GUHA method is a tool of the logic of discovery It uses a one to one relation between theoretical and observational statements to get all interesting theoretical statements A GUHA procedure generates all interesting observational statements and verifies them in a given observational data Output of the procedure consists of all observational statements true in the given data Several GUHA procedures dealing with association rules couples of association rules action rules histograms couples of histograms and patterns based on general contingency tables are involved in the LISp Miner system developed at the Prague University of Economics and Business Various results about observational calculi were achieved and applied together with the LISp Miner system The book covers a brief overview of logic of discovery Many examples of applications of the GUHA procedures to solve real problems relevant to data mining and business intelligence are presented An overview of recent research results relevant to dealing with domain knowledge in data mining and its automation is provided Firsthand experiences with implementation of the GUHA method in the Python language are presented     The Mathematical Gazette ,1926     **The Cumulative Book Index** ,1965 A world list of books in the English language
