Advances on Superelliptic Curves and Their Applications Lubjana Beshaj, Eustrat Zhupa, 2015-07-15 This book had its origins in the NATO Advanced Study Institute ASI held in Ohrid

Macedonia in 2014 The focus of this ASI was the arithmetic of superelliptic curves and their application in different scientific areas including whether all the applications of hyperelliptic curves such as cryptography mathematical physics quantum computation and diophantine geometry can be carried over to the superelliptic curves Additional papers have been added which provide some background for readers who were not at the conference with the intention of making the book logically more complete and easier to read but familiarity with the basic facts of algebraic geometry commutative algebra and number theory are assumed The book is divided into three sections The first part deals with superelliptic curves with regard to complex numbers the automorphisms group and the corresponding Hurwitz loci The second part of the book focuses on the arithmetic of the subject while the third addresses some of the applications of superelliptic curves Iaeng Transactions On Engineering Sciences: Special Issue For The International Association Of Engineers Conferences 2014 Sio-iong Ao, Alan Hoi-shou Chan, Hideki Katagiri, Li Xu, 2015-03-11 Two large international conferences on Advances in Engineering Sciences were held in Hong Kong March 12 14 2014 under the International MultiConference of Engineers and Computer Scientists IMECS 2014 and in London UK 2 4 July 2014 under the World Congress on Engineering 2014 WCE 2014 respectively This volume contains 37 revised and extended research articles written by prominent researchers participating in the conferences Topics covered include engineering mathematics computer science electrical engineering manufacturing engineering industrial engineering and industrial applications The book offers tremendous state of the art advances in engineering sciences and also serves as an excellent reference work for researchers and graduate students working with on engineering sciences *Game-Based Learning and the Power of Play* Pauline Rooney, Nicola Whitton, 2016-08-17 In recent years there has been growing interest in the use of games to enhance learning across multiple educational levels and extensive research has shown that games have considerable potential for enhancing learning motivation and skills development However despite a growing acknowledgement of this potential challenges remain and the use of games in formal education contexts remains far from mainstream While some studies identify design and development issues as a key barrier including associated costs others highlight organisational and infrastructural difficulties involved in implementing games in the classroom More recently increasing recognition of these difficulties has led many to explore how gaming elements rather than fully fledged games can be used to engage and enhance student learning a practice now widely referred to as gamification This edited collection of chapters explores the application potential and challenges of game based learning and gamification across multiple disciplines and sectors including psychology education business history languages and the creative arts With contributions exploring the use of games across the full educational spectrum from early childhood education through to the corporate sector it provides comprehensive insights into the potential of games and play for facilitating learning and engagement at every life stage Algorithms - ESA 2015 Nikhil Bansal, Irene Finocchi, 2015-09-01 This book constitutes the refereed proceedings of the 23rd Annual European Symposium on Algorithms ESA 2015 held in Patras Greece in September

Numerical Development - From cognitive functions to neural underpinnings Korbinian Moeller, Elise Klein, Klaus F Willmes - von Hinckeldey, Karin Kucian, 2015-02-24 Living at the beginning of the 21st century requires being numerate because numerical abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our numerical development in formal e g school but also informal contexts e g family street we acquire culturally developed abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies develop has also benefitted considerably from the advent of different neuro imaging techniques allowing for an evaluation of developmental changes in the human brain In sum we are now starting to put together a more and more coherent picture of how numerical competencies develop and how this development is associated with neural changes as well In the end this knowledge might also lead to a better understanding of the reasons for atypical numerical development which often has grievous consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities Therefore this Research Topic deals with all aspects of numerical development findings from behavioural performance to underlying neural substrates from cross sectional to longitudinal evaluations from healthy to clinical populations To this end we included empirical contributions using different experimental methodologies but also theoretical contributions review articles or opinion papers
