*Sub-structure Coupling for Dynamic Analysis* Hector Jensen, Costas Papadimitriou, 2019-03-26 This book combines a model reduction technique with an efficient parametrization scheme for the purpose of solving a class of complex and computationally expensive simulation based problems involving finite element models These problems which have a wide range of important applications in several engineering fields include reliability analysis structural dynamic simulation sensitivity analysis reliability based design optimization Bayesian model validation uncertainty quantification and propagation etc The solution of this type of problems requires a large number of dynamic re analyses To cope with this difficulty a model reduction technique known as substructure coupling for dynamic analysis is considered While the use of reduced order models alleviates part of the computational effort their repetitive generation during the simulation processes can be computationally expensive due to the substantial computational overhead that arises at the substructure level In this regard an efficient finite element model parametrization scheme is considered When the division of the structural model is guided by such a parametrization scheme the generation of a small number of reduced order models is sufficient to run the large number of dynamic re analyses Thus a drastic reduction in computational effort is achieved without compromising the accuracy of the results The capabilities of the developed procedures are demonstrated in a number of simulation based problems involving uncertainty

Drawing Futures Bob Sheil, Frédéric Migayrou, Luke Pearson, Laura Allen, 2016-11-11 Drawing Futures brings together international designers and artists for speculations in contemporary drawing for art and architecture Despite numerous developments in technological manufacture and computational design that provide new grounds for designers the act of drawing still plays a central role as a vehicle for speculation There is a rich and long history of drawing tied to innovations in technology as well as to revolutions in our philosophical understanding of the world In reflection of a society now underpinned by computational networks and interfaces allowing hitherto unprecedented views of the world the changing status of the drawing and its representation as a political act demands a platform for reflection and

innovation Drawing Futures will present a compendium of projects writings and interviews that critically reassess the act of drawing and where its future may lie Drawing Futures focuses on the discussion of how the field of drawing may expand synchronously alongside technological and computational developments The book coincides with an international conference of the same name taking place at The Bartlett School of Architecture UCL in November 2016 Bringing together practitioners from many creative fields the book discusses how drawing is changing in relation to new technologies for the production and dissemination of ideas     *The Future of Multi-Pillar Pensions* Lans Bovenberg,Casper van Ewijk,Ed Westerhout,2012-06-21

Pension systems are under serious pressure worldwide This pressure stems not only from the well known trend of population aging but also from those of increasing heterogeneity of the population and increasing labour mobility The current economic crisis has aggravated these problems thereby exposing the vulnerability of many pension schemes to macroeconomic shocks This book reconsiders the multi pillar pension scheme against the background of these pressures It adopts an integral perspective and asks how the pension system as a whole contributes to the three basic functions of pension schemes facilitating life cycle financial planning insuring idiosyncratic risks and sharing macroeconomic risks across generations It focuses on the optimal balance between the various pension pillars and on the optimal design of each of the schemes It sketches a number of economic trade offs showing that countries may opt for different pension schemes depending on how they react to these trade offs     **General Assembly Action** Kentucky.
