Effectiveness of teachers' guides in the Global South Benjamin Piper, Yasmin Sitabkhan, Jessica Mejia, Kellie Betts, 2018-05-10 This report presents the results of RTI International Education's study on teachers guides across 13 countries and 19 projects Using quantitative and qualitative methods we examine how teachers guides across the projects differ and find substantial variation in the design and structure of the documents We develop a scripting index so that the scripting levels of the guides can be compared across projects The impact results of the programs that use teachers guides show significant impacts on learning outcomes associated with approximately an additional half year of learning showing that structured teachers guides contribute to improved learning outcomes During observations we find that teachers make a variety of changes in their classroom instruction from how the guides are written showing that the utilization of structured teachers guides do not create robotic teachers unable to use their own professional skills to teach children Unfortunately

many changes that teachers make reduce the amount of group work and interactivity that was described in the guides suggesting that programs should encourage teachers to more heavily utilize the instructional routines designed in the guide The report includes a set of research based guidelines that material developers can use to develop teachers guides that will support effective instructional practices and help improve learning outcomes The key takeaway from the report is that structured teachers guides improve learning outcomes but that overly scripted teachers guides are somewhat less effective than simplified teachers guides that give specific guidance to the teacher but are not written word for word for each lesson in the guide **Handbook of Response to Intervention** Shane R. Jimerson, Matthew K. Burns, Amanda M.

Klein, Klaus F Willmes - von Hinckeldey, Karin Kucian, 2015-02-24 Living at the beginning of the 21st century requires being numerate because numerical abilities are not only essential for life prospects of individuals but also for economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our numerical development in formal e g school but also informal contexts e g family street we acquire culturally developed abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical capabilities In recent years numerical development has gained increasing research interest documented in a growing number of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally our understanding of how numerical competencies develop has also benefitted considerably from the advent of different neuro imaging techniques allowing for an evaluation of developmental changes in the human brain In sum we are now starting to

put together a more and more coherent picture of how numerical competencies develop and how this development is associated with neural changes as well. In the end this knowledge might also lead to a better understanding of the reasons for atypical numerical development which often has grievous consequences for those who suffer from developmental dyscalculia or mathematics learning disabilities. Therefore this Research Topic deals with all aspects of numerical development findings from behavioural performance to underlying neural substrates from cross sectional to longitudinal evaluations from healthy to clinical populations. To this end we included empirical contributions using different experimental methodologies but also theoretical contributions, review articles or opinion papers.

Malaysia on 30 March 2017. *Second International Handbook on Globalisation, Education and Policy Research* Joseph

Zajda, 2015-01-06. This handbook presents a global overview of developments in education and policy change during the last decade. It provides an accessible practical and comparative source of current research that examines the intersecting and

diverse discourses of this important issue. Divided into two parts, the handbook first examines globalisation and education

policy reforms including coverage of main trends as well as specific policy issues such as gender equity, minorities and human rights. Next, the handbook offers a comparative perspective that evaluates the ambivalent and problematic relationship

between globalisation, the state and education reforms globally. It features coverage on curricula issues and education

reforms in schools around the world as well as the curriculum in the global culture. Now more than ever, there is a need to

understand and analyse both the intended and the unintended effects of globalisation on economic competitiveness,

educational systems, the state and relevant policy changes, all as they affect individuals, the higher education sector, schools,

policy makers and powerful corporate organisations across the globe. By examining some of the major education policy issues,

particularly in the light of recent shifts in education and policy research, this handbook offers readers a comprehensive

picture of the impact of globalisation on education policy and reforms. It will serve as a vital sourcebook of ideas for

researchers, practitioners and policy makers in education. **Science Education Research and Practices in Taiwan**

Opportunity Greg J. Duncan, Richard J. Murnane, 2014-01-01. In this landmark volume, Greg J. Duncan and Richard J. Murnane

lay out a meticulously researched case showing how, in a time of spiraling inequality, strategically targeted interventions and

supports can help schools significantly improve the life chances of low-income children. The authors offer a brilliant synthesis

of recent research on inequality and its effects on families children and schools They describe the interplay of social and economic factors that has made it increasingly hard for schools to counteract the effects of inequality and that has created a widening wedge between low and high income students Restoring Opportunity provides detailed portraits of proven initiatives that are transforming the lives of low income children from prekindergarten through high school All of these programs are research tested and have demonstrated sustained effectiveness over time and at significant scale Together they offer a powerful vision of what good instruction in effective schools can look like The authors conclude by outlining the elements of a new agenda for education reform Restoring Opportunity is a crowning contribution from these two leading economists in the field of education and a passionate call to action on behalf of the young people on whom our nation s future depends Copublished with the Russell Sage Foundation *Homeschooling High School* Shirley Erwee,2014-08-28
