**Biomarker Tests for Molecularly Targeted Therapies** National Academies of Sciences, Engineering, and Medicine, Institute of Medicine, Board on Health Care Services, Committee on Policy Issues in the Clinical Development and Use of Biomarkers for Molecularly Targeted Therapies, 2016-07-30 Every patient is unique and the evolving field of precision medicine aims to ensure the delivery of the right treatment to the right patient at the right time. In an era of rapid advances in biomedicine and enhanced understanding of the genetic basis of disease, health care providers increasingly have access to advanced technologies that may identify molecular variations specific to an individual patient which subsequently can be targeted for treatment. Known as biomarker tests for molecularly targeted therapies, these complex tests have the potential to enable the selection of the most beneficial treatment and also to identify treatments that may be harmful or ineffective for the molecular underpinnings of an individual patient's disease. Such tests are key to unlocking the promise of precision medicine. Biomarker tests for molecularly targeted therapies represent a crucial area of focus for developing methods that could later be applicable to other areas of precision medicine. The appropriate regulatory oversight of these tests is required to ensure that they are accurate, reliable, properly validated, and appropriately implemented in clinical practice. Moreover, common evidentiary standards for assessing the beneficial impact of biomarker-guided therapy selection on patient outcomes, as well as the effective collection and sharing of information related to those outcomes, are urgently needed to better inform clinical decision making. *Biomarker Tests for Molecularly Targeted Therapies* examines opportunities and challenges to the use of biomarker tests to select optimal therapy and offers recommendations to accelerate progress in this field. This report explores regulatory issues, reimbursement issues, and clinical practice issues related to the clinical development and use of biomarker tests for targeting therapies to patients. Properly validated, appropriately implemented biomarker tests hold the potential to enhance patient care and improve outcomes, and therefore addressing the challenges facing such tests is critical.

**EU Law of Competition and Trade in the Pharmaceutical Sector** Pablo Figueroa, Alejandro Guerrero, 2019 This book provides a systematic analysis of the law and practice of EU competition and trade in the pharmaceutical sector. Authored by leading private practitioners, economists, scholars, and high-level officials at competition regulators, this work provides valuable insider knowledge on the application of law and policies to the pharmaceutical industry. The work contains extensive commentary on the legislation and the latest case law and administrative precedents in this sector at both EU and national level, including certain significant jurisdictions, e.g., the US, China. Coverage of various key developments includes the recent pay-for-delay antitrust investigations, the perennial issues around parallel trade, and an examination of mergers among pharmaceutical companies and medical devices manufacturers. In addition to the legal analysis, it offers vital economic and business perspectives to ensure that the reader has the full range of tools with which to prepare for cases and conduct transactions within the pharmaceutical industry. *Virus Discovery by Metagenomics: The (Im)possibilities* Bas E.

Dutilh,Alejandro Reyes,Richard J. Hall,Katrine L. Whiteson,2017-10-25 Since the late 1800s the discovery of new viruses was a gradual process Viruses were described one by one using a suite of techniques such as electron microscopy and viral culture Investigators were usually interested in a disease state within an organism and expeditions in viral ecology were rare The advent of metagenomics using high throughput sequencing has revolutionized not only the rate of virus discovery but also the nature of the discoveries For example the viral ecology and etiology of many human diseases are being characterized non pathogenic viral commensals are ubiquitous and the description of environmental viromes is making progress This Frontiers in Virology Research Topic showcases how metagenomic and bioinformatic approaches have been combined to discover classify and characterize novel viruses

### **Microbiotechnology Based Surfactants and Their Applications**

Pattanathu K.S.M. Rahman,2016-02-18 Biosurfactants are structurally diverse group of bioactive molecules produced by a variety of microorganisms They are secondary metabolites that accumulate at interfaces reduce surface tension and form micellar aggregates This research topic describes few novel microbial strains with a focus on increasing our understanding of genetics physiology regulation of biosurfactant production and their commercial potentials A major stumbling block in the commercialization of biosurfactants is their high cost of production Many factors play a significant role in making the process cost effective and the most important one being the use of low cost substrates such as agricultural residues for the production of biosurfactants With the stringent government regulations coming into effect in favor of production and usage of the bio based surfactants many new companies aim to commercialize technologies used for the production of biosurfactants and to bring down costs This Research Topic covers a compilation of original research articles reviews and research commentary submitted by researchers enthusiastically working in the field of biosurfactants and highlights recent advances in our knowledge of the biosurfactants and understanding of the biochemical and molecular mechanisms involved in their production scale up and industrial applications Apart from their diverse applications in the field of bioremediation enhanced oil recovery cosmetic food and medical industries biosurfactants can also boast off their unique eco friendly nature to attract consumers and give the chemical surfactants a tough competition in the global market This biosurfactant focused research topic aims to summarize the current achievements and explore the direction of development for the future generation of biosurfactants and bioemulsifiers Some of the biosurfactant optimization processes presented are well structured and already have a well established research community We wish to stimulate on going discussions at the level of the biosurfactant production including common challenges in the process development novel organisms and new feedstock and technologies for maximum benefit key features of next generation biosurfactants and bioemulsifiers We have compiled the research outputs of international leaders in the filed of biosurfactant particularly on the development of a state of the art and highly efficient process platform

### *Ensuring Innovation in Diagnostics for Bacterial Infection* Morel C.,McClure

L.,Edwards S.,Goodfellow V.,Sandberg D.,Thomas J.,2016-04-18 The inappropriate use of antibiotics is a primary cause of the

ongoing increase in drug resistance amongst pathogenic bacteria The resulting decrease in the efficacy of antibiotics threatens our ability to combat infectious diseases Rapid point of care tests to identify pathogens and better target the appropriate treatment could greatly improve the use of antibiotics Yet there are few such tests currently available or being developed despite the rapid pace of medical innovation Clearly something is inhibiting the much needed development of new and more convenient diagnostic tools This study delineates priorities for developing diagnostics to improve antibiotic prescription and use with the goal of managing and curbing the expansion of drug resistance It calls for new approaches particularly in the provision of diagnostic devices and in doing so outlines some of the inadequacies in health science and policy initiatives that have led to the dearth of such devices The authors make the case that there is a clear and urgent need for innovation not only in the technology of diagnosis but also in public policy and medical practice to support the availability and use of better diagnostic tools This book explores the complexities of the diagnostics market from the perspective of both supply and demand unearthing interesting bottlenecks some obvious some more subtle It calls for a multifaceted and broad policy response and an overhaul of current practice so that the growth of bacterial resistance can be stemmed

*Quantitative Biology: Dynamics of Living Systems* Noriko Hiroi, Viji M. Draviam, Tetsuya J. Kobayashi, Akira Funahashi, Chun-Biu Li, Douglas B. Murray, Hiroaki Takagi, Ziya Kalay, Rinshi S. Kasai, Jason Edward Shoemaker, Akatsuki Kimura, Naoki A. Irie, 2017-07-24 With the emergence of Systems Biology there is a greater realization that the whole behavior of a living system may not be simply described as the sum of its elements To represent a living system using mathematical principles practical quantities with units are required Quantities are not only the bridge between mathematical description and biological observations they often stand as essential elements similar to genome information in genetics This important realization has greatly rejuvenated research in the area of Quantitative Biology Because of the increased need for precise quantification a new era of technological development has opened For example spatio temporal high resolution imaging enables us to track single molecule behavior in vivo Clever artificial control of experimental conditions and molecular structures has expanded the variety of quantities that can be directly measured In addition improved computational power and novel algorithms for analyzing theoretical models have made it possible to investigate complex biological phenomena This research topic is organized on two aspects of technological advances which are the backbone of Quantitative Biology i visualization of biomolecules their dynamics and function and ii generic technologies of model optimization and numeric integration We have also included articles highlighting the need for new quantitative approaches to solve some of the long standing cell biology questions In the first section on visualizing biomolecules four cutting edge techniques are presented Ichimura et al provide a review of quantum dots including their basic characteristics and their applications for example single particle tracking Horisawa discusses a quick and stable labeling technique using click chemistry with distinct advantages compared to fluorescent protein tags The relatively small physical size stability of

covalent bond and simple metabolic labeling procedures in living cells provides this type of technology a potential to allow long term imaging with least interference to protein function Obien et al review strategies to control microelectrodes for detecting neuronal activity and discuss techniques for higher resolution and quality of recordings using monolithic integration with on chip circuitry Finally the original research article by Amariet et al describes the oscillatory behavior of metabolites in bacteria They describe a new method to visualize the periodic dynamics of metabolites in large scale cultures populations These four articles contribute to the development of quantitative methods visualizing diverse targets proteins electrical signals and metabolites In the second section of the topic we have included articles on the development of computational tools to fully harness the potential of quantitative measurements through either calculation based on specific model or validation of the model itself Kimura et al introduce optimization procedures to search for parameters in a quantitative model that can reproduce experimental data They present four examples transcriptional regulation bacterial chemotaxis morphogenesis of tissues and organs and cell cycle regulation The original research article by Sumiyoshi et al presents a general methodology to accelerate stochastic simulation efforts They introduce a method to achieve 130 times faster computation of stochastic models by applying GPGPU The strength of such accelerated numerical calculation are sometimes underestimated in biology faster simulation enables multiple runs and in turn improved accuracy of numerical calculation which may change the final conclusion of modeling study This also highlights the need to carefully assess simulation results and estimations using computational tools
