

CENTER POSITION – LOAD-AND-DEPTH CONTROL

In "Load and Depth" control, the effect of both load control and depth control will be balanced. With varying soils, the load and depth control affects the load control only slightly, i.e. it boosts traction with only a slight change in working depth, and with light soil, the load control prevents the implement from moving down beyond its required depth.

Additional notches for the rearshift selector lever are provided on the quadrant. These extra notches are located between the notches for "depth control" and "load and depth control" and between "load and depth control" and "load control". They make it possible to control the implement's operation as the soil condition requires it. If the soil turns to "load", in another, turn to "depth".

"FLOAT" POSITION

In "Float" position for rearshift controlled implements with gauge wheels the implement can move freely up and down and thus follow the ground contours independent of the tractor. To obtain a "floating" action, place rearshift selector lever in depth control ("FWD") position and push rearshift control lever all the way forward.

ADJUSTING RATE OF IMPLEMENT DROP

The rate at which the rearshift and implement will drop is controlled – independent of the control lever – by adjusting the rate-of-drop lever (A). The rate of drop should not be less than 2 seconds.

THREE-POINT HITCH COMPONENTS

- A-Drop Bar
- B-Link Bar
- C-Link Bar

Rear-mounted implements can be attached and controlled precisely by means of the three-point hitch.

DRAFT LINKS

Tractors can be equipped with reversible draft links or telescopic draft links.

REVERSIBLE DRAFT LINKS

Reversible draft links can be used for category I or II implements. Reverse the draft links if you wish to change from category II to vice versa.

When installing category I implements, install special bushings, available from your JOHN DEERE dealer, over draft pins.
