Memorandum Agricultural Sciences End Year Paper 2014:

Global Agriculture and the American Farmer Kimberly Ann Elliott, 2017-06-27 The United States is one of the world's largest producers and exporters of a range of agricultural commodities and the largest provider of foreign assistance so U.S. policies have big effects on global food security and other global public goods linked to agriculture. On the positive side of the ledger President Obama created the Feed the Future aid initiative to promote agricultural development in poorer countries as a tool to achieve the global goals of ending hunger and extreme poverty which are mostly rural. But that generosity is undercut by U.S. support for farmers that distorts global markets and ignores negative spillovers for the rest of the world. In this book Elliott focuses on three policy areas that are particularly damaging for developing countries: traditional agricultural subsidy and trade policies that support the incomes of American farmers at the expense of farmers elsewhere; the biofuels mandate which in its current form increases market volatility while doing little if anything to mitigate climate change; and weak regulation of antibiotic use in livestock which contributes to the global spread of drug-resistant super bugs. While noting that broad reforms are needed to fix these problems, Elliott also identifies practical steps that U.S. policymakers could take in the relatively short run to improve farm policies for American taxpayers and consumers as well as for the poor and vulnerable in developing countries.

The EU, the US and Global Climate Governance Christine Bakker, Francesco Francioni, 2016-02-17 This volume presents a critical analysis of transatlantic relations in the field of environmental governance and climate change. The work focuses on understanding the possible trends in the evolution of global environmental governance and the prospects for breaking the current impasse on climate action. Drawing on research involving experts from eleven different universities and institutes, the authors provide innovative analyses on policy measures taken by the EU and the US, the world's largest economic and commercial blocs, in a number of fields ranging from general attitudes on environmental leadership with regard to climate change to energy policies, new technologies for hydrocarbons extraction and carbon capture as well as the effects of extreme weather events on climate-related political attitudes. The book examines the way in which the current attitudes of the EU and the US with regard to climate change will affect international cooperation and the building of consensus on possible climate policies and looks to the future for international environmental governance, arguably one of the most pressing concerns of civilisation today. This book, which is based on research carried out in the context of the EU
