## **Memorandum Of Creative Arts November 2012:**

*Chromatic Algorithms* Carolyn L. Kane, 2014-08-13 These days we take for granted that our computer screens and even our phones will show us images in vibrant full color Digital color is a fundamental part of how we use our devices but we never give a thought to how it is produced or how it came about Chromatic Algorithms reveals the fascinating history behind digital color tracing it from the work of a few brilliant computer scientists and experimentally minded artists in the late 1960s and early 70s through to its appearance in commercial software in the early 1990s Mixing philosophy of technology aesthetics and media analysis Carolyn Kane shows how revolutionary the earliest computer generated colors were built with the massive postwar number crunching machines these first examples of computer art were so fantastic that artists and computer scientists regarded them as psychedelic even revolutionary harbingers of a better future for humans and machines But Kane shows the explosive growth of personal computing and its accompanying need for off the shelf software led to standardization and the gradual closing of the experimental field in which computer artists had thrived Even so the gap between the bright bold presence of color onscreen and the increasing abstraction of its underlying code continues to lure artists and designers from a wide range of fields and Kane draws on their work to pose fascinating questions about the relationships among art code science and media in the twenty first century

**The SAGE Handbook of Intellectual Property** Matthew David, Debora Halbert, 2014-11-18 This Handbook brings together scholars from around the world in addressing the global significance of controversies over and alternatives to intellectual property IP today It brings together over fifty of the leading authors in this field across the spectrum of academic disciplines from law economics geography sociology politics and anthropology This volume addresses the full spectrum of IP issues including copyright patent trademarks and trade secrets as well as parallel rights and novel applications In addition to addressing the role of IP in an increasingly information based and globalized economy and culture it also challenges the utility and viability of IP today and addresses a range of alternative futures

**Annual Report** India. Ministry of External Affairs, 2012 **Professional Journal of the United States Army**, 2013-05 Report India. Ministry of External Affairs, 2012 Number without language: comparative psychology and the evolution of numerical cognition Christian Agrillo, Michael Beran, 2013-07-09

Despite once being reserved as perhaps a unique human ability and one reliant on language comparative and developmental research has shown that numerical abilities predate verbal language Human infants and several non human species have been shown to represent numerical information in varied contexts and the capacity to discriminate both small and large numerosities has been reported in mammals birds amphibians and fish The similar performances often observed across such diverse species have led to the hypothesis that there may be shared core systems underlying number abilities of non human species and human non verbal numerical abilities Thus animal models could provide useful insight on our comprehension of numerical cognition and in particular the evolution of non verbal numerical abilities Several aspects need be clarified For

instance the ontogeny of numerical competence in animals has been rarely investigated It is unclear whether all species can represent numerical information or on the contrary use non numerical continuous quantities that co vary with number such as cumulative surface area density and space In addition the existence of a specific mechanism to process small numbers
