Critical Role of Animal Science Research in Food Security and Sustainability National Research Council,Division on Earth and Life

Sciences, Board on Agriculture and Natural Resources, Policy and Global Affairs, Science and Technology for Sustainability Program, Committee on Considerations for the Future of Animal Science Research, 2015-03-31 By 2050 the world's population is projected to grow by one third reaching between 9 and 10 billion. With globalization and expected growth in global affluence, a substantial increase in per capita meat, dairy, and fish consumption is also anticipated. The demand for calories from animal products will nearly double, highlighting the critical importance of the world's animal agriculture system. Meeting the nutritional needs of this population and its demand for animal products will require a significant investment of resources as well as policy changes that are supportive of agricultural production. Ensuring sustainable agricultural growth will be essential to addressing this global challenge to food security.

Critical Role of Animal Science Research in Food Security and Sustainability identifies areas of research and development, technology, and resource needs for research in the field of animal agriculture, both nationally and internationally. This report assesses the global demand for products of animal origin in 2050 within the framework of ensuring global food security, evaluates how climate change and natural resource constraints may impact the ability to meet future global demand for animal products in sustainable production systems, and identifies factors that may impact the ability of the United States to meet demand for animal products, including the need for trained human capital, product safety and quality, and effective communication and adoption of new knowledge, information, and technologies. The agricultural sector worldwide faces numerous daunting challenges that will require innovations, new technologies, and new ways of approaching agriculture if the food, feed, and fiber needs of the global population are to be met. The recommendations of **Critical Role of Animal Science Research in Food Security and Sustainability** will inform a new roadmap for animal science research to meet the challenges of sustainable animal production in the 21st century.

The Fuzzy and the Techie Scott Hartley, 2017-04-25 Artfully explains why it is time for us to get over the false division between the human and the technical. Tim Brown, CEO of IDEO and author of *Change by Design*, Scott Hartley first heard the terms "fuzzy" and "techie" while studying political science at Stanford University. If you majored in humanities or social sciences, you were a fuzzy. If you majored in computer or hard sciences, you were a techie. While Silicon Valley is generally considered a techie stronghold, the founders of companies like Airbnb, Pinterest, Slack, LinkedIn, PayPal, Stitch Fix, Reddit, and others are all fuzzies. In other words, people with backgrounds in the liberal arts. In this brilliantly counterintuitive book, Hartley shatters assumptions about business and education today: learning to code is not enough. The soft skills—curiosity, communication, and collaboration—along with an understanding of psychology and society's gravest problems are central to why technology has value. Fuzzies are the instrumental stewards of robots, artificial intelligence, and machine learning. They offer a human touch that is of equal, if not greater, importance in our technology-led world than what most techies can provide. For anyone doubting whether a well-rounded liberal arts education is practical in today's world, Hartley's work will come as an inspiring revelation.
