## **Life Science 2014 Scope P1:**

### **Fulfilling the Sustainable Development Goals** Narinder Kakar, Vesselin Popovski, Nicholas A. Robinson, 2021-08-30

This book contains assessment of the progress or the lack of it in implementing the UN Sustainable Development Goals SDGs Through review of the assessments and of case studies readers can draw lessons from the actions that could work to positively address the goals The 2030 Agenda for Sustainable Development is designed to catalyze action in critical areas of importance to humanity and the planet The effort to implement the SDGs however demands a sense of urgency in the face of environmental degradation climate change emerging conflicts and growing inequality among a number of other socio economic problems Five years after the launch of the 2030 Agenda this book takes stock of how far the world has come and how we can position ourselves to achieve the global targets The book is one of the first to assess how the implementation is impeded by the onset of COVID 19 It contains a special chapter on COVID 19 and the SDGs while many thematic chapters on different SDGs also assess how COVID 19 adversely affects implementation and what measures could be taken to minimize the adverse effects This publication thus provides a fresh look at implementation of the SDGs highlighting impactful and creative actions that go beyond the business as usual development efforts The volume reinforces this analysis with expert recommendations on how to support implementation efforts and achieve the SDGs through international and national strategies and the involvement of both the public and private sectors The result is an indispensable textual tool for policy makers academia intergovernmental organizations IGOs and non governmental organizations NGOs as well as the public as we march toward the 2030 deadline

### **Religious Perspectives on Social Responsibility in Health** Joseph Tham, Chris

Durante, Alberto García Gómez, 2018-04-26 This book discuss the meaning and implications of the social and ethical implications of the notion of social responsibility in healthcare in six major world religions Buddhism Christianity Confucianism Hinduism Islam Judaism This collection of papers is based on a four day workshop where bioethics experts from various religious traditions gathered They discussed the ways in which their respective traditions could or could not uphold the tenets of Article 14 of UNESCO s Universal Declaration of bioethics and Human Rights The different papers presented in this book are based on this interchange of ideas at the workshop The book explores the potential points of convergence among the various perspectives presented as well as a discussion on the ways in which their moral differences may be managed The managing of these moral differences through international socio ethical mechanisms contributes significantly to the UNESCO Universal Declaration of Bioethics and Human Rights goal of simultaneously respecting religio cultural pluralism while upholding a commitment to human rights

How Humans Recognize Objects: Segmentation, Categorization and Individual Identification Chris Fields, 2016-08-18 Human beings experience a world of objects bounded entities that occupy space and persist through time Our actions are directed toward objects and our language describes objects We categorize objects into kinds that have different typical properties and behaviors We regard some kinds of objects

each other for example as animate agents capable of independent experience and action while we regard other kinds of objects as inert We re identify objects immediately and without conscious deliberation after days or even years of non observation and often following changes in the features locations or contexts of the objects being re identified Comparative developmental and adult observations using a variety of approaches and methods have yielded a detailed understanding of object detection and recognition by the visual system and an advancing understanding of haptic and auditory information processing Many fundamental questions however remain unanswered What for example physically constitutes an object How do specific classically characterizable object boundaries emerge from the physical dynamics described by quantum theory and can this emergence process be described independently of any assumptions regarding the perceptual capabilities of observers How are visual motion and feature information combined to create object information How are the object trajectories that indicate persistence to human observers implemented and how are these trajectory representations bound to feature representations How for example are point light walkers recognized as single objects How are conflicts between trajectory driven and feature driven identifications of objects resolved for example in multiple object tracking situations Are there separate what and where processing streams for haptic and auditory perception Are there haptic and or auditory equivalents of the visual object file Are there equivalents of the visual object token How are object identification conflicts between different perceptual systems resolved Is the common assumption that persistent object is a fundamental innate category justified How does the ability to identify and categorize objects relate to the ability to name and describe them using language How are features that an individual object had in the past but does not have currently represented How are categorical constraints on how objects move or act represented and how do such constraints influence categorization and the re identification of individuals How do human beings re identify objects including each other as persistent individuals across changes in location context and features even after gaps in observation lasting months or years How do human capabilities for object categorization and re identification over time relate to those of other species and how do human infants develop these capabilities What can modeling approaches such as cognitive robotics tell us about the answers to these questions Primary research reports reviews and hypothesis and theory papers addressing questions relevant to the understanding of perceptual object segmentation categorization and individual identification at any scale and from any experimental or modeling perspective are solicited for this Research Topic Papers that review particular sets of issues from multiple disciplinary perspectives or that advance integrative hypotheses or models that take data from multiple experimental approaches into account [The ^AOxford Handbook of Neurolinguistics](#) Greig I. de Zubizaray, Niels O. Schiller, 2019-03-01 Neurolinguistics is a highly interdisciplinary field drawing on linguistics psychology neurology and cognitive neuroscience Neurolinguistics like psycholinguistics covers aspects of language processing but unlike psycholinguistics it draws on data from patients with damage to language processing capacities or the use of modern

neuroimaging technologies such as fMRI TMS or both The burgeoning interest in neurolinguistics reflects the fact that an understanding of the neural bases of this data can inform more biologically plausible models of the human capacity for language The Oxford Handbook of Neurolinguistics provides concise overviews of this rapidly growing field and engages a broad audience with an interest in the neurobiology of language

*The Economics of the Modernisation of Direct Real Estate and the National Estate - a Singapore Perspective* Kim Hin David HO, 2022-05-11 The Economics of The Modernisation of Direct Real Estate and The National Estate A Singapore Perspective Chapter 1 takes a close look the vector autoregression VAR model offering a dynamic system of solely direct real estate variables for international direct real estate investors and policy makers to enable their decision making Chapter 2 examines the association of residential price and aggregate consumption A cross spectra analysis is helps to so validate because of its model free characteristics Chapter 3 is concerned with the underlying housing market dynamics and housing price time series variation via the Singapore SG generalized dynamic factor model GDFM Chapter 4 is concerned with the in depth market analysis and empirical analysis of the structural behavior of the important SG private housing sector Chapter 5 acknowledges that an in depth sector analysis and an empirical analysis are imperative to better understand the structural behavior of the SG office sector Chapter 6 is concerned with the Main Upgrading Programme MUP a highly targeted subsidized Housing Development Board HDB policy since the 1990s Chapter 7 recognizes the National Estate denoting SG s built environment due to physical planning integrated urban design and the direct influence of the SG government in providing physical infrastructure via government ministries statutory boards and public authorities Chapter 8 offers the book s conclusion

*Neuroanatomy and transgenic technologies* Laurent Gautron, Makoto Fukuda, Michael Lazarus, Alexander C Jackson, Chen Liu, 2015-04-21 Neuroanatomists increasingly rely on techniques enabling them to manipulate genes in defined brain cell populations In particular engineered transgenes which encode a variety of fluorescent reporter proteins can be inserted into the genome or delivered into desired brain regions using viral vectors thereby allowing the labeling of molecularly defined populations of neurons and or glial cells Transgenic technology can also be used to selectively delete genes in targeted neuronal populations or bi directionally modulate their electrical excitability using optogenetic or chemogenetic techniques One of the primary advantages of using transgenic reagents is to simplify the identification and tracing of targeted population of brain cells which can be laborious

using traditional techniques in neuroanatomy In this research topic we assembled up to date reviews and original articles that demonstrate the versatility and power of transgenic tools in advancing our knowledge of the nervous system with a special emphasis on the application of transgenic technology to neuroanatomical questions     **Indian Science Abstracts** ,1987     The Criminal Justice Periodical Index ,1987     **Environment Abstracts** ,1976 This database encompasses all aspects of the impact of people and technology on the environment and the effectiveness of remedial policies and technologies featuring more than 950 journals published in the U S and abroad The database also covers conference papers and proceedings special reports from international agencies non governmental organizations universities associations and private corporations Other materials selectively indexed include significant monographs government studies and newsletters
