

Leica MM Multi Wavelength Cell Scoring

powered by MetaMorph®

Analysis Software Drop-in for Leica MM AF

- Multi-Parameter analysis of up to seven wavelengths
- Identification of subpopulations of cells
- Adaptive background correction™ for improved segmentation
- Field and Cell-by-Cell measurements

The Leica MM Multi Wavelength Cell Scoring Application Module for Leica MM AF software is designed for the scoring of cells with up to seven fluorescent stains.

This flexible module is ideal for counting and logging measurements of cells in multiple wavelength experiments. Using a fluorescent marker for the nucleus and additional markers for the cytoplasm or the entire cell, each wavelength is analyzed and cells are assigned scoring profiles for the presence or absence of each marker.

The module makes a number of additional cell-by-cell measurements including per-wavelength number and percentage of cells scored as positive or negative, scoring profiles, area and intensity.

The module utilizes Adaptive Background Correction adapting the cell detection algorithm to the local intensity ranges between and within cells to provide the most robust segmentation available. This technique enables probe detection even with highly variable background fluorescence within a single image.

The simple interface minimizes setup efforts and at the same time enables users to customize the settings and measurements to obtain the best possible results specific to the type of cells used in the experiments.
