Prospects for quinoa adaptation and utilization in Eastern and Southern Africa Maliro, M.F.A., Abang, M.M., Mukankusi, C., Lung'aho, M., Fenta, B., Wanderi, S., Kapa, R., Okiro, O.A., Koma, E., Mwaba, C., Isse, M.M. and Bazile, D., Food and Agriculture Organization of the United Nations, 2021-01-22 Quinoa *Chenopodium quinoa* Willd is an emerging crop in the world with great potential to contribute to Africa's food and nutritional security. The increased popularity of quinoa in the last few years is attributed to the impact of activities carried out within the framework of the International Year of Quinoa IYQ2013 which helped greatly to raise awareness on the crop's multiple nutritional benefits and its expanding cultivation globally. The Food and Agriculture Organization (FAO) which championed the IYQ2013 has worked with developing countries in Africa which are grappling with food and nutrition insecurity to introduce and promote cultivation of quinoa. Production and utilization of quinoa is expected to significantly reduce food and nutrition insecurity and help farming communities adapt to climate change. FAO implemented a Technical Cooperation on quinoa titled Technical Assistance for the Strengthening of the Food System of Quinoa TCP SFE 3406 implemented in 2014 to 2015. This project was designed to support the institutional capacities of seven countries including Djibouti, Ethiopia, Kenya, Somalia, South Sudan, Uganda, and Zambia in the production, evaluation, management, utilization, and marketing of Quinoa under diverse farming systems and agro-ecological zones. The project was implemented and led by the FAO Subregional office for Eastern Africa. SFE Quinoa evaluation trials that were conducted across multiple sites in the participating countries served as pilot adaptability studies for the crop. This technical paper presents key technological, institutional, and policy considerations for the successful introduction, adaptation, and utilization of quinoa in Africa.

Food Security for African Smallholder Farmers Hupenyu Allan, Mupambwa, Adornis Dakarai Nciizah, Patrick Nyambo, Binganidzo Muchara, Ndakalimwe Naftal Gabriel, 2022-02-28 This book provides a synthesis of current agricultural research in Africa with the aim of presenting evidence-based information that can be directly applied into improving the African smallholder farmers' food security. It presents positive scientific research that has been undertaken in Africa in simpler terms, thus driving the research for development agenda contributing to the attainment of SDG 2. Numerous research that targets resource-poor African smallholder farmers has been published, yet the region faces very low productivity levels. This lack of translation from research to food security and increased agricultural incomes is due to the poor uptake of scientific research by farmers, which is partly due to poor presentation of this body of knowledge into simpler forms that extension workers and farmers can directly adopt. Therefore, this book offers research information in an easy digestible and application-oriented style so as to enable transformation of the African agricultural sector by effectively driving agricultural productivity in Africa. This book is of interest to African extension workers who will translate the simplified knowledge into lessons that can be useful to smallholder farmers. The book is also beneficial for policy makers as well as academics, researchers, and other science-based professionals.

*Transforming Higher Education in Asia and Africa*

Fred M. Hayward,2020-03-01 Drawing on over fifty years of on the ground experience Fred M Hayward s Transforming Higher Education in Asia and Africa analyzes change processes in higher education in eight Asian and African countries The twelve cases range from the push to upgrade and transform higher education in Afghanistan in the midst of a war to the successful struggle against apartheid in South African institutions as well as thwarted efforts in Sierra Leone and Madagascar Providing both practical lessons learned and hope for communities globally Hayward demonstrates that higher education change and even transformation which is more fundamental and structural can occur even in the most difficult environments Successful transformation requires well crafted strategic and budget plans with careful implementation monitoring and effective leadership at multiple levels Yet also critical are a commitment to human development a desire for freedom and belief in democracy and recognition that high quality higher education is essential to national development

In many respects the continent of Africa is in transition Prominent among them currently is the nutrition transition One consequence of the nutrition transition is the increase in prevalence of nutrition related non communicable diseases NCDs such as obesity type 2 diabetes cardiovascular diseases and certain cancers Although NCDs are a global public health problem the rate of increase in NCDs morbidity and mortality in some African countries is staggering This surge has been linked to modifiable environmental factors factors that facilitate the consumption of obesogenic energy dense nutrient poor foods rather than unrefined cereals fruits and vegetables It has long been recognized that the physical and social environments in which people live work and eat are critical determinants of their health More recently there has been a greater focus on the food environment as a key determinant of health Available evidence shows that unhealthy food

environments drive unhealthy diets and unhealthy diet is one of four main risk factors for NCDs      *Livestock Genomics and Community-based Breeding Strategies in Low-and-Middle-Income Countries: Challenges, Opportunities and Future Perspectives* Isidore Houaga, Maria Wurzinger, Ntanganedzeni Mapholi, 2024-07-17 Low and Middle Income Countries LMICs are home to diverse populations of livestock species adapted to various agro ecological zones production systems and harsh environmental conditions However the livestock in LMICs have not been systematically improved and current low levels of productivity do not meet the demand for livestock products by a growing population Recent advances in next generation sequencing and genotyping technologies have enabled the application of genomic selection in various livestock species in some western countries with great success Despite the low adoption of genomic breeding in LMICs livestock industry various studies and programs were initiated and some are still ongoing Furthermore community based breeding programs CBBP have been initiated in many LMICs with great benefits for smallholder livestock farmers CBBPs are based on the active participation of farmers from inception through to implementation and consider their needs views decisions breeding objectives and available infrastructure In Africa for instance small ruminants CBBPs have generated substantial genetic gains and socioeconomic benefits for rural poor farmers However the current challenges affecting the data recording and genetic evaluation of the CBBPs in LMICS are yet to be fully reported Furthermore the CBBPs are yet to integrate genomic selection in their breeding strategies For sustainable livestock breeding in LMICs there is a need to assess the current status of livestock genomics and community based breeding strategies to identify the challenges and suggest mitigating strategies and future improvement strategy plans In this Research Topic we aim to collect findings from past and current livestock genomics and community based breeding programs the challenges the lessons learned the opportunities and future perspectives      **Annual Economic Report** ,2017      ... *Approved Output Based Budget Document* Malawi,2015      The ...
